

*Uncovering the Logic behind solving K4, which is applied on all aspects, going forward:

[See the Middle of Pg 39 to top of Pg 40 from his Oral History Interview from July 2009.]

- 1) If this really happened, he would've remembered details, which he tends to gloss over.
- 2) This sounds purposely contrived by someone who is trying to send a hidden message to others while trying to avoid discovery.
- 3) He keeps bringing the idea of 2 versus 3 throughout this entire diatribe.
- 4) He tells us it is English text.
- 5) He lays out his methodology, but he does so in REVERSE:

>>Took the "English Text" and cut it into strips in sentences.

(Ends in "s". Therefore, more than 1 sentence. At least 2.)

Took the sentences and rearranged them. All in a different order.

(Begins with "All". That means at least 3 sentences.)

And glued them onto a piece of paper.

Made 2 sets of this.

One set if there were 3 people in the room, one set if there were two people in the room, and one genius. This place is only five minutes from here.

So I devised this system.<<

In REVERSE order:

A system:

Possible Key (someplace only 5 minutes from here)

The genius who wrote it.

A group of 2 (the genius and the only other person who has the key)

A group of 3 (everyone else)

2 sets of Cryptograms (or, Layers?)

Starting from letters glued onto paper (the original PT)

Multiple sentences (at least 3, if you follow the logic from the other way)

Rearranged entire sentences.

Cut the rearranged sentences into strips.

This is English text.

No Math

This is a public address!! He (the genius) is trying to convey a secret message to one other person, without giving away the secret to anyone else. For this description (bottom of page 39 to page 40 of transcribed interview), place names having double word proper nouns serve as the CT (ciphered speech).

Using "Historical Intelligence" to shed light on the Logic JS is using (and, continues to use throughout all of the Kryptos sculpture, including Pre-K, the Morse Code and purposely misspelled PT):

An explanation of the hidden Logic:

Repeated letters (per each word) are set to the side in parentheses. The original non-repeaters remain behind. Therefore,

h	i	s	t	o	r	i	c	a	l	>	h	i	s	t	o	r	c	a	l	(	i	)						
i	n	t	e	l		l	i	g	e	n	c	e	>	i	n	t	e	l			(	i	l	i	e	n	e	)

Now, group the non-repeaters on top of one another, and shake them apart.

h	i	s	t	o	r	c	a	l
i	n	t	e	l	g	c		

h			i	s	t	o	r		c	a	l		
i	n	t						e			l	g	c

Now add back in the repeaters, which were put in parentheses:

h			i	s	t	o	r		c	a	l															
i	n	t						e			l	g	c	(	i		l	i	e		n	e	)			

Read it like a Rail Fence:

hint is to recall gc (i lie ne)

This hint was later used on the K3 CT to uncover what I reference as a “bullseye target with arrow sticking out of the center”. The “Arrow” was a set of letters RHAEIOY, which appropriately corresponded to the reverse of the superscript YAHR on the K3 CT.

The hint to find the first key was: Ay Hiero (Hiero refers to hieroglyphics and Ay was a Pharaoh).
Applying the Logic to:

Pharaoh

Ay Hiero

Pharo (ah)

Ay Hiero

p (ah) ha r o

ay hi e r o

Pay (ah) hi hare or o

pay a higher or owe

-> INTEREST RATE

Repeating the Logic:

I N T E R S (ET)

RA TE

IRA NTETE R S (ET)

IRA ENTITY ARE SET

-> TRUST

T R US (T)

(*See accompanying work of Layer 1)

Back to the JS Interview:

“This place is only 5 minutes from here.” Looking at the DC Landmarks, I tried the same Logic on
“Washington Monument”.

w	a	s	h	i	n	g	t	o	n				
m	o	n	u	m	e	n	t						
w	a	s	h	i	n	g	t	o		(	n	)	
m	o	n	u	e	t					(	m	n	)

Washing to (n)

u Monet (mn)

washing to (n)u monet = LAUNDER

[*I never quite figured out (mn). However, based upon work I've done since discovering this Logic, it's possible that (mn) = "amen". I've come across a second layer using "hint is to recall gc (i lie ne)" using the CT of K3 (see above). It's possible that LAUNDER is the last Keyword in a series of Keys, which confirmed the transition from Layer 1 to Layer 2.]
