

K4 Echelon EEId Solution and Procedure Draft

From Ibn Şifre to Yahoo Kryptos Group:

Bismillah, Let us begin:

Part 1 - Big H

Carryout Transpositions Step:

Start with K3 and arrange it in 7 rows by 48 columns as shown in Fig 1-1.

	1	2	3	4
	123456789012345678901234567890123456789012345678			
1	ENDYAHROHNLSRHEOCPTEOIBIDYSHNAIACHTNREYULDSL	LSLL		
2	NOHSNOSMRWXMN	ETPRNGATIHN	RARPESLNNELEBLPII	ACAEWMT
3	WNDITEENRAHCTENEUDRETNHAE	OETFOLSEDTIWENHAE	IOYTEY	
4	QHEENCTAYCREIFTBRSPAMHHEWENATAMATEGYEERLBTEE	FOAS		
5	FIOTUETUAEOTOARMAEERTNRTIBSEDDNIAAHTTMSTEWPI	EROA		
6	GRIEWFEBAECTDDHILCEIHSITEGOEAO	SDDRYDLORITRKL	MLEH	
7	AGTDHARDPNEOHMGFMFEUHEECDM	RIPFEIMEHNLSSTTR	TVDOHW	

Fig. 1-1, K3

Flip K3 about the columns so that column 48 is first and column 1 is last, as shown in Fig 1-2. This is done only to make the technique easier to visualize. Call it K3'.

	4	3	2	1
	876543210987654321098765432109876543210987654321

4	SAOLLSDBLRERNTHTAMANHSYW	
5	AOREACAETSMBELEAINDEPRAI	
6	HELYOIETIROWITDDDSOFTEOE	
7	WHOFEETTTTSSEYGEMIEFTANED	

Fig. 1-4, W0

Take the Rows and arrange them as

R5:R1
R6:R2
R7:R3

shown below in W1, Fig 1-5:

Examples:

```
ciphertext => NY....  
pad        => EL....  
-----  
plaintext  => BE....
```

Example 1:

```
step 1:  
N => 19  
E => 11
```

```
step 2:  
19 - 11 = 8
```

```
8 => B  
plaintext => B
```

Example 2:

```
step 1:  
Y => 2  
L => 17
```

```
step 2:  
2 - 17 = -15
```

```
step 3:  
-15 + 26 = 11
```

```
11 => E  
plaintext => E
```

For ease, I have provided a python script that automates this in my folder in the Yahoo Kryptos Group Files under personal folders.

Continuing, Arrange K4 in 6 rows so that they look like small "pyramids" or perhaps "A's" on their sides as shown in K4-1 Fig 1-7. Also shown in Fig 1-7a is K4 arranged in it's pad configuration.

```

1      OBKRUOXOGHULBSO
2 LIFBBWFLRVQQPRNGKSSO
3      TWTQJSJSSEKZZW

4 ATJKLUDIAWINFB
5 NYPVTTMZFPKWGDKZXTJC
6 DIGKUHUAUEKCAR

```

Fig. 1-7, K4-1

```

      1      2      0      1      2
123456789012345678901234123456789012345678901234

ATJKLUDIAWINFB      OBKRUOXOGHULBSO
NYPVTTMZFPKWGDKZXTJC LIFBBWFLRVQQPRNGKSSO
DIGKUHUAUEKCAR      TWTQJSJSSEKZZW

```

Fig. 1-7a, K4-1

And apply K4 in Fig 1-7a over the negative space of the H in W1, Fig 1-5b as shown in Fig 1-7b in an OTP decrypt.

```

      1      2      0      1      2
123456789012345678901234123456789012345678901234

R5:R1 AOREACAETSMBELEAINDEPRAILLSEIPWL UYETTHACAIADESBD
R6:R2 HELYOIETIROWITDDDSOFTEOETMW MLKRIIPLLDYRNNLSAEGR
R7:R3 WHOFEETTSSEYGE MIEFTANEDYETDVTRAHNELNHEESLOIRME

```

Fig. 1-7b

In other words:

Take Row 1 of K4 and Row 1, Columns 9 to 23 of W1, Fig. 1-5 (after the LLSEIPWL clue) and apply the OTP for the resulting plain text:

```

K4 R1 OBKRUOXOGHULBSO
W1 R1 UYETTHACAIADESB
-----
DSIWLLLVSHZAWKW

```

And Take Row 2 of K4 and Row 2, Columns 4 to 23 of W1 and apply the OTP for the resulting plain text:

K4	R2	LIFBBWFLRVQQPRNGKSSO
W1	R2	MLKRIIPLLDYRNNLSAEOG

		ZXFANBCKDFMNDBYANURM

And Take Row 3 of K4 and Row 3, Columns 10 to 23 of W1 and apply the OTP for the resulting plain text:

K4	R3	TWTQJSJQSSEKZZW
W1	R3	NELNHEESLOPIRM

		EFGRMOCKISWDXO

And Take Row 4 of K4 and Row 5, Columns 2 to 15 of W1 and apply the OTP for the resulting plain text:

K4	R4	ATJKLUDIAWINFB
W1	R5	OREACAETSMBELE

		YPONBHZEROABUW

And Take Row 5 of K4 and Row 6, Columns 2 to 21 of W1 and apply the OTP for the resulting plain text:

K4	R5	NYPVTTMZFPKWGDZXTJC
W1	R6	ELYOIETIROWITDDDSOFT

		BERLINHDEXPBCKJIMZTO

And Take Row 6 of K4 and Row 7, Columns 2 to 15 of W1 and apply the OTP for the resulting plain text:

K4	R6	DIGKUHUAUEKCAR
W1	R7	HOFEETTSSEYGE

		VDRIDDLPIOIAQJ

One should get the following for the resulting plain text:

1	2		0	1	2
123456789012345678901234	12345678901234	41	23456789012345678901234		
YPONBHZEROABUW			DSIWLLLVSHAWKW		
BERLINHDEXPBCKJIMZTO			ZXFANBCKDFMNDBYANURM		
VDRIDDLPIOIAQJ			EFGRMOCKISWDXO		

Fig. 1-8

Now re-arrange by flipping the rows, (or 'pyramids' base to base) and get P1 as shown in Fig. 1-9,

1	DSIWLLLVSHAWKW	YPONBHZEROABUW
2	ZXFANBCKDFMNDBYANURM	BERLINHDEXPBCKJIMZTO
3	EFGRMOCKISWDXO	VDRIDDLPIOIAQJ

Fig. 1-9, P1

Misspellings Step:

Guess the misspellings as follows in Fig. 1-10.

Don't worry, there are ways to tell if you have the right ones. The rows labeled with P1M are the rows of the correct letters where a misspelling occurs in the plaintext, as best I can guess. The rows labeled with P1 are the plaintext row from the OTP step. The rows labeled with W2 are the rows from the pad text and show the corresponding pad letter where the misspelling occurred in the plaintext.

	1	2		1	2
	123456789012345678901234	12345678901234		123456789012345678901234	12345678901234
P1M 1		L A O T		E E Z	
P1 R1		DSIWLLLVSHAWKW		YPONBHZEROABUW	
W2-14		UYETTHACIADESB		OREACAETSMBELE	
P1M 2		K Q I O		S E T S	
P1 R2		ZXFANBCKDFMNDBYANURM		BERLINHDEXPBCKJIMZTO	
W2-25		MLKRIIPLLDYRNNLSAEOG		ELYOIETIROWITDDDSOFT	
P1M 3		D R R		D E C	
P1-R3		EFGRMOCKISWDXO		VDRIDDLPIOIAQJ	
W2-36		NELNHEESLOPIRM		HOFEETTSSEYGE	

Fig. 1-10

Which gives us PT1, our K4 solution to the 97 charters as shown in Fig. 1-11

```

1      DLIALLOSTHAWKW YEONEHZEROABUZ
2 ZXFANKCQDFINDBYANORM BERLINSDEXPECTJIMSTO
3      EDGRROCKISRDXO DDRIDDLEIOICQJ

```

Fig. 1-11, PT1

Examining the misspellings, Fig. 1-11, we can find further messages.

	1	2		1	2
	1234567890	1234567890		1234567890	1234567890
P1M 1		DLIALLOSTHAWKW		YEONEHZEROABUZ	
P1M 2	ZXFANKCQDFINDBYANORM			BERLINSDEXPECTJIMSTO	
P1M 3		EDGRROCKISRDXO		DDRIDDLEIOICQJ	

Fig. 1-12

Read the misspelled letters across by rows in such a way:

P1M 1 <- right to left

P1M 2 -> left to right

P1M 3 <- right to left

To get the following, PT1-MA, as shown in Fig. 1-13.

ZEE TO AL K Q IO SETS C ED R RD

Fig. 1-13, PT1-MA

Now read the misspelled letters going up-down, left to right to get the following, PT1-MD, as shown in Fig 1-14. (odd columns: up and even columns: down)

KLQD A R IO T R O DEE SEE CZTS

Fig. 1-14, PT1-MD

Next, examine the W2 Letters at the positions of the misspellings, Fig. 1-15.

	1	2		1	2
	1234567890	1234567890		1234567890	1234567890
W2-14		UYETHACIADESB		OREACAETSMBELE	
W2-25	MLKRI	IPLDYRNNLSAEOG		ELYOIE TIROWITDODDSOFT	
W2-36		NELNHEESLOPIRM		HOFEETTSSEYGE	

Fig. 1-15

Again, read the misspelled letters across by rows in such a way:

W2-14 <- right to left

W2-25 -> left to right

W2-36 <- right to left

To get the following, PT1-WA, as shown in Fig. 1-16.

ECR I CT YI LYE TI DOYTH P HE

Fig. 1-16, PT1-WA

Now read the W2 letters from Fig. 1-15, alternating column by column by going down-up followed by up-down, left to right to get the following, PT1-WD, as shown in Fig 1-17.

IY LET HY CIPEHR CT TIYED O

Fig. 1-17, PT1-WD

Part 2: Big O

Bismillahi Al Haqq il Ala, let us continue.

Carryout Transpositions Step:

As in part 1, start with W0 in Fig 1-4, but this time re-arrange the rows as follows:

R4:R3

R1:R6

R5:R7

shown below in W1', Fig 1-5 and Draw a 'Big O' on it in the following way:

	1	2		0		1		2																																								
	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4																								
R5:R3	A	O	R	E	A	C	A	E	T	S	M	B	E	L	E	A	I	N	D	E	P	R	A	I	Y	E	T	D	V	T	R	A	H	N	E	L	N	H	E	E	S	L	O	P	I	R	M	E
R1:R6	L	L	S	E	I	P	W	L	U	Y	E	T	H	A	C	A	I	A	D	E	S	B	D	H	E	L	Y	O	I	E	T	I	R	O	W	I	T	D	D	D	S	O	F	T	E	O	E	
R4:R7	S	A	O	L	L	S	D	B	L	R	E	R	N	T	H	T	A	M	A	N	H	S	Y	W	W	H	O	F	E	E	T	T	S	S	E	Y	G	E	M	I	E	F	T	A	N	E	D	

Fig. 2-1, W1'

Continuing, Arrange K4 in as shown in K4-2, Fig 2-2a. Note that 'NYPVTTMZFPKWG' is repeated. Also shown in Fig 2-2b is K4 arranged in its pad configuration.

```

1  OBKRUOXOGHULBSOLIFBBW
2  FLRVQQPRNGKSSOTWTQSJQ
3  SSEKZZWATJKLUDIAWINFBN
4a YPVTTMZFPKWGD
5  KZXTJCDIGKUHUAUEKCAR

4b NYPVTTMZFPKWG

```

Fig. 2-2a, K4-2

```

      1      2      0      1      2
    123456789012345678901234123456789012345678901234
R1:R2  OBKRUOXOGHULBSOLIFBBWFLRVQQPRNGKSSOTWTQSJQ
R4a:b  YPVTTMZFPKWGD                      NYPVTTMZFPKWG
R3:R2  SSEKZZWATJKLUDIAWINFBNKZXTJCDIGKUHUAUEKCAR

```

Fig. 2-2b, K4-2

OTP, One Time Pad, Decryption Step:

Take Row 1 of K4-2 and Row 3, Columns 4 to 23 of W1' and apply the OTP decryption algorithm, as before in part 1, for the resulting plain text:

```

K4-2 R1  OBKRUOXOGHULBSOLIFBBW
W1 ' R3  EACAETSMBELEAINDEPRAI
-----
      QRLQDRMGOPTSRLFATCARB

```

And Take Row 4a of K4-2 and Row 2, Columns 2 to 14 of W1' and apply the OTP for the resulting plain text:

```

K4-2 R4a YPVTTMZFPKWGD
W1 ' R2  LSEIPWLUYETH
-----
      EWEIRUBLRINCV

```

And Take Row 3 of K4-2 and Row 1, Columns 3 to 24 of W1' and apply the OTP for the resulting plaintext:

K4-2	R3	SSEKZZWATJKLUDIAWINFBN
W1'	R1	OLLSDBLRERNHTAMANHSYW

		RIQQILSSNIAGASBIJVOSSV

And Take Row 5 of K4-2 and Row 7, Columns 1 to 20 of W2' and apply the OTP for the resulting plain text:

K4-2	R5	KZXTJCDIGKUHUAUEKCAR
W2'	R7	WHOFEETTTTSSEYGEMIEFT

		PENMOXSECQIPNQDNEXUW

The plain text is backwards, so arrange them as in P2 shown in Fig. 2-3.

1	BR	ACTAFLRSTPOGMRDQLRQ	
2	VC	NIRLBURIEWEY	
3	VSSOVJIBSAGAINSSLIQQIR	WUXENDQNPIQCESXOMNEP	

Fig. 2-3, P2

Misspellings Step:

Guess the misspellings as follows in Fig 2-4. The rows labeled with P2M are the rows of the correct letters where a misspelling occurs in the plaintext, as best I can guess. The rows labeled with P2 are the plaintext row from the OTP step. The rows labeled with W' are the row from the pad text and shows the corresponding pad letter where the misspelling occurred in the plaintext.

	2	1		2	1
	43210987654321	0987654321	43210987654321	43210987654321	0987654321
P2M 1		O A L A			
P2 R1		BRAC T AFLRSTPOGMRDQLRQ			
W'-1		IARPEDNIAEL E BMSTEACAE			
P2M 2			O G		D
P2 R2			VCNIRLBURIEWE		
W'-2			HTTEYULWP I ESL		
P2M 3	D	S	M	T	E
P1 R3	V	S	S	O	V
W'-3	W	Y	S	H	N

Fig. 2-4

Which gives us PT2, our K4 part 2 solution as shown in Fig 2-5.

```

BRACTOFLASTLOGARDQLRQ
      VONGRLBURIEDE
DSSOSJIMSAGAINSTLIEQIR    QUXENDQDPIECESXOONEP

```

Fig. 2-5, PT2

Examining the misspellings, Fig 2-6, we can find further messages.

	2	1		2	1
	43210987654321	0987654321	43210987654321	43210987654321	0987654321
P2M 1		BRACTO F LASTLOGARDQLRQ			
P2M 2			VON G RLBURIED E		
P2M 3		DSSOSJIM S AGAINSTLIEQIR		QUXENDQD P IECESX O NEP	

Fig 2-6

Read the misspelled letters across by rows in such a way:

P2M 3 -> left to right
P2M 2 <- right to left
P2M 3 <- right to left

To get the following, PT2-MA, as shown in Fig. 2-7.

DS MT EQ DE OD GOAL A O

Fig. 2-7, PT2-MA

Now read the misspelled letters going up on odd rows, down on even, right to left, to get the following, PT2-MD, as shown in Fig 2-8.

O ED Q DET A GO LAM OS D

Fig. 2-8, PT2-MD

Next, examine the W' Letters at the positions of the misspellings, Fig. 2-6.

	2	1	2	1
	432109876543210987654321	432109876543210987654321		
W'-1	IARPEDNTAEIEBMSTEACAE			
W'-1		HTTEYULWPIESL		
W'-2	WYSHNANATHHTNRERLBDSLLO		TFEIMEGYESSTTTEEFOWH	

Fig 2-9

Again, read the misspelled letters across by rows in such a way (note that row 2 is first):

W'-3 <- right to left
W'-2 <- right to left
W'-1 <- right to left

to get the following, PT2-WA, as shown in Fig. 2-10.

F SYTS L A NW SET SE A D

Fig. 2-10, PT2-WA

Now read the W' letters from Fig. 2-9, up on even rows, down on odd, left to right to get the following, PT2-WD, as shown in Fig 2-11.

F SYTS S L SET EA A D NW

Fig. 2-11, PT2-WD

Part 2.1 - The other part of the Big O

In part one, an algorithm was given for OTP decryption. Here we will give the corresponding algorithm for OTP encryption.

Assign to each letter of the Kryptos alphabet a number as shown in Fig. 1-6. Then, for a letter of the plaintext and a letter of the pad, add the numbers corresponding to the

letters. If the resulting number greater than 25, subtract 26 from it. Take the resulting number and find its corresponding letter. That letter is the letter of the ciphertext.

Examples:

```
plaintext  => BE....
pad        => EL....
-----
ciphertext => NY....
```

Example 1:

step 1:

B => 8

E => 11

step 2:

$8 + 11 = 19$

19 => N

ciphertext => N

Example 2:

step 1:

E => 11

L => 17

step 2:

$11 + 17 = 28$

step 3:

$28 - 26 = 2$

2 => Y

ciphertext => Y

Take Row 2 of K4-2 and Row 6, Columns 1 to 21 of W2' and apply the OTP encryption algorithm for the resulting ciphertext:

```
K4 ' R2  FLRVQQPRNGKSSOTWTQSJQ
W2 ' R6  YETDVTRAHNELNHEESLOPI
-----
          HYOSJXTBASEWZNIBDEENC
```

And Row 4b of K4-2 and Row 6, Columns 1 to 21 of W2' and apply the OTP encryption algorithm for the resulting ciphertext:

K4' R4b	NYPVTTMZFPKWG
W2' R6	WITDDDSOFTEOE

	JLASHHXTXAEYX

For the first, the text is in reverse with misspellings (note starting at column 7 the letters: T BASE). Guess the misspellings as follows in Fig 2-10.

P2.1.1M	I	S	T
P2.1.1	CNEEDBINZWESABTXJSOYH		
W'	IPOLSEEHNLENHARTVDTEY		

P2.1.2M	T	A	K
P2.1.2	JLASHHXTXAEYX		
W'	WITDDDSOFTEOE		

Fig. 2-10

which gives us

INEEDBINSWESTBTXJSOYH

Fig. 2-11a PT2.1.1

which gives us

JLASTHATXKEY

Fig. 2-11b PT2.1.2

Reading off the letters across left to right, for P2.1.1 and then W' we get

IST INH

Fig. 2-12a PT2.1.1-MW

And reading off the letters across right to left for the guesses and left to right for W' for P2.1.2 we get

K AT DS T

Fig. 2-12b PT2.1.2-MW

Part 3: Big Y!?

Bismillahi Ar Rahmani Raheem, let us continue.

Carryout Transpositions Step:

As in part 1, start with W0 in Fig 1-4, but this time re-arrange the rows as shown below in W1'', Fig 3-1 and Draw a 'Big Y' on it in the following way:

```

      1      2
123456789012345678901234
R5 AOREACAETSMBEIEAINDEPRAI
R2 TMWMLKRIIPLLDYRNNISAEOGR
R3 YETDVTRAHNELNHEESLOPIRME
R7 WHOFEETTTTSSEYGEMIEFTANED
R1 LLSEIPWLUYETTHACAIADESBD
```

Fig. 3-1, W1''

```

1 OBKRUOXOGHULB
2 SOLIFBBWFLRVQQ
  PRNGKSSOT
3 WTQSJQSSEKZZW
  A
4 TJKLUDIAWINFB
  NYPVTTMZFPKWG
  DK
5 ZXTJCDIGKUHUAU
  EKCAR
```

Fig. 3-2, K4-3

OTP, One Time Pad Step:

As Before do the OTP decrypt step on each of the parts:

```

K4-3 R3 WTQSJQSSEKZZW
W1'' R3 LNHEESLOPIRME
-----
      SESUOHIRBEXAF

K4-3 R5 ZXTJCDIGKUHUAU
W1'' R7 FEETTTTSSEYGEMI
-----
      GGNFOSCAINRDIS
```

K4-3	R2	SOLIFBBWFLRVQQ
W1 ' '	R3	LLSEIPWLUYETTH

		IHETWOESLIJMJS

The plain text is as shown in P3.1 Fig. 3-3a.

3		SESUOHIRBEXAF
4		GGNFOSCAINRDIS
5		IHETWOESLIJMJS

Fig. 3-3a, P3.1

And do the OTP encrypt step on the other two parts:

K4-3	R4	TJKLUDIAWINFB
W1 ' '	R5	OREACAETSMBEL

		CLEXTLKEPARWZ

K4-3	R1	OBKRUOXOGHULB
W1 ' '	R2	KRIIPLLDYRNNL

		OCIJXVIIIIHDZ

The plain text is as shown in P3.1 Fig. 3-3b, note row 2 is read backwards.

1	CLEXTLKEPARWZ
2	OCIJXVIIIIHDZ

Fig. 3-3b, P3.2

Misspellings Step:

Guess the misspellings as follows in Fig 3-4. The rows labeled with P3M are the rows of the correct letters where a misspelling occurs in the plaintext, as best I can guess. The rows labeled with P3 are the plaintext row from the OTP step. The rows labeled with W" are the row from the pad text and shows the corresponding pad letter where the misspelling occurred in the plaintext.

		1		2	
		12345678901	2345678901	234	
P3M 3			O A	C	
P3 R3		SESUOHIRBEXAF			
W' '-3		LNHEESLOPIRME			
P3M 4	T P T L				
P3 R4		GGNFOSCAINRDIS			
W' '-4		FEETTTISSEYGEMI			
P3M 5	N I O				
P3 R5		IHETWOESLIJMJS			
W' '-5		SOLIFBBWFLRVQQ			

Fig. 3-4

Which gives us PT3.1, our K4 part 3.1 solution as shown in Fig 3-5.

```

                SOSAOHIRBEXAC
            TGNPOSCTINRDIL
        INETWOISLIOMJS

```

Fig. 3-5, PT3.1

Examining the misspellings, Fig 3-5, we can find further messages.

		1		2	
		12345678901	2345678901	234	
P3M 3			SOSA	OHIRBEXAC	
P3M 4		TGN	POSCT	INRDIL	
P3 R5		INETWOIS	LIOMJS		

Fig 3-6

Read the misspelled letters across by rows in such a way:

P3M 3 -> left to right
 P3M 4 -> left to right
 P3M 5 -> left to right

To get the following, PT3.1-MA, as shown in Fig. 3-7.

O A CT PT LN 10

Fig. 3-7, PT3.1-MA

Now read the misspelled letters going up on odd rows, down on even, left to right, to get the following, PT3.1-MD, as shown in Fig 3-8.

N TIP TOO AL C

Fig. 3-8, PT3.1-MD

As for the first two parts, they are shown in Fig 3-12, PT3.2

```
123456789012345678901234
P3M 1      T      I      T
P3 R1      CLEXTLKEPARWZ
W' '-1     OREACAETSMBEL

P3M 2      M      L O
P3 R2      OCIJXVIIIHHDZ
W' '-2     KRIIPLLDYRNNL
```

Fig. 3-12, PT3.2

And as before, with some brevity

And as before, with some brevity, PT3.2, PT3.2-MA are given:

C TEXT LIE PART Z
O DL IIII VX JIM O

TI TO LM

Fig. 3-12, PT3.2, PT3.2-MA

Interpretations:

What follows are my best guesses - certainly not everything will be correct. CDQ! SOS!

Plaintexts and others:

PT1:

DL I ALL LOST H-AWK-WYE ONE H ZERO A BUZZ X
FAN K CQD FIND BY ANORM BERLIN'S D EXPECT
JIM S TO ED GR ROCK IS RD X
ODD RIDDLE 10 I C Q J

PT2:

BR ACT OF LAST LOG A RD Q LRQ

V ON GR L BURIED E D'S
SOS JIM S AGAINST LIE Q I RQ U X
END Q D PIECES X O ONE P

PT2.1.1:
I NEED BINS WEST B TX JS O Y H

PT2.1.2:
J LAST H-A TX KEY X

PT3.1
SOS AOHI RB EXACT GN POS CT IN RD I LINE TWO IS LIOM JS

PT3.2
C TEXT LIE PART Z
O DL IIII VX JIM O

PT1-MA:
ZEE TO AL K Q IO SETS C ED R RD

PT1-MD:
KLQD A R IO T R O DEE SEE CZTS

PT1-WA:
ECRI CT YI LYE TI DOYTH P HE

PT1-WD:
IY LET HY CIPEHR CT TIYED O

PT2-MA:
DS MT EQ DE OD GOAL A O

PT2-MD:

PT2-WA:
F SYTS L A NW SET SE A D

PT2-WD:
F SYTS S L SET EA A D NW

PT2.1.1-MW:

IS TIN H

PT2.1.2-MW:

K AT DS T

PT3.1-MA:

O A CT PT LN IO

PT3.1-MD:

N TIP TOO AL C

PT3.2-MA:

TI TO LM

Note I'm guessing the following relations:

K is for C

C is for CIA

D is for T

T is for Teufelsberg, "Devil's Mountain", Berlin

so D is for Devil

PT 1:

Devil won ALL, LOST H AWKward WYE ONE H ZERO² BUZZ X¹

Fan of K³ CQD⁴ find by abnormal Berlin's D⁵ expect Jim S. to Ed⁶ ground rock is RD⁷ X

Odd riddle - 10 I see⁸? J⁹

1. This could also be read like: Devil won, all lost, H-Y on E Hz Arrow a buzz X; or Devil eyes lost, or D Lies, etc. It is also interesting since when read backward (It's the Devil - you must read it backwards). Reading forward we find the letters 'LIXL' (if we substitute A for X since 'A IS X' is a Kryptos password). In Roman numerals it can be 51-40 or backwards its 415. This might be a hidden reference to Project 415, aka the ECHELON program. H-Y is also a reference to YAR.

2. Berlin Hz Arrow: The big antenna tower that was used by the British GCHQ at the NSA Field Station Teufelsberg, Berlin - also 1H0A probably should be read A0H1, maybe in reference to its EM emission mode?; see Chaos Computer Club's page: <http://dasalte.ccc.de/teufelsberg/>

3. Us, Kryptos' Fans

4. CQD is an older radio distress call that was used before SOS

5. D is for Devil - Teufelsberg

6. Jim Sanborn, the sculptor and artist, and CIA cryptographer Edward M. Scheidt

7. Riddle or "Our Devil" meaning our secret listening field site.

6. There are ten pieces to the riddle

9. Jim Sanborn

PT 2:

Brother¹⁰ act of last log a riddle? Location request:

V on GRound L¹¹ buried E D'S¹²

SOS Jim S. against lie? I require you X

End? D pieces X O one piece.¹³

10. Brother: the British, or perhaps "B R act" meaning "Berlin, our act"

11. Maybe L - stands for Logs, or Lies, or Laws, - or all three!

12. Buried I's and D's SOS or maybe Ed's SOS.

13. A hint of the big O

The misspelling for these 2 main PT's:

ZEE TO AL K Q IO SETS C ED R RD

D to all Kryptos Fans - ? 10 sets, see Ed our riddle

KLQD A R IO T R O DEE SEE CZTS

L CQD A is 10 and T is 0 (morse code to binary?) D See sets.

ECRI CT YI LYE TI DOYTH P HE

Encrypt CT, Why I LIED - T Doeth protest He!

IY LET HY CIPEHR CT TIYED O

IY Letter H-Y Cipher CT TIYED O

The H-Y Cipher CT s the YAR letters - Vig. Encrypt them (ENDYHR..) with a 'V' to see what I mean.

DS MT EQ DE OD GOAL A O

Devil's Mountain Equals D, Odd goal a (Big) O

O ED Q DET A GO LAM OS D

O Ed, Q Determine A, Go to L and M, Is D (?)

F SYTS L A NW SET SE A D

Field site's L, a northwest set, southeast is a D

I NEED BINS WEST B TX JS O Y H? IS TIN H

I need bin's²⁰ west berlin text, Jim S.

The O-Y-H are the 3 Plaintexts, and use the '?' here!

20. Binary or it might refer to JFK's "Ich bin Ein Berliner" speech.

J LAST H-A TX KEY X

Pay attention to the last part of the H plaintext.

SOS AOHI RB EXACT GN POS CT IN RD I LINE TWO IS LIOM JS

You would kill me if I told you here and didn't let you solve the riddle within a riddle - it's a really nice tip :)

C TEXT LIE PART Z
O DL IIII V X JIM O

See text lie in part 2, and 4, 5, 10 - there are those numbers again :)

K AT DS T
Kryptos at D's T ?

O A CT PT LN IO
O A cipher text - plain text (line 2)

N TIP TOO AL C
Nice tip to all Kryptos fans.

TI TO LM
TI to L and M

That enough for now!

Salam and Happy Discoveries and Adventures,
Ibn Şifre
