P	R	B	L	U	C	K

I was able to do ten steps beyond this with seemingly positive outcomes, but there was an indicator in the ninth step (after this one), that I saw later, to do something else. I performed the action and got a distinct indicator to use a scytale. I was not able to come up with anything, possibly because I could not come up with the correct number of characters per turn or maybe I had done (or not done) something necessary early on. So I thought about the above result that I got earlier. I was not able to do anything with it and I got positive results after all following steps, so I ignored it. But now I am concerned that a solution to this apparent puzzle needs to be accomplished before I can get the scytale to produce something readable, though I'm not sure I was rigorous enough in manipulating the strip when I tried it.

Sanborn, in talking about K4, said something about having to deal with smoke and mirrors along the way. This appears to be the smoke and mirrors part.

ANKH PROJECT

WIDIA VERSION (Cont.)

The seeming correspondences between letters in the upper seven rows with the “flipped” bottom seven rows of columns 1 and 7, and to a lesser extent towards the middle column, have rows 8 through 14 as a mirror image of rows 1 through 7. Among other things, I tried a Quagmire III *encrypt* OTP substitution using the flipped version as keyword against the original version as CT.

F

CT							Key						
C	C	S	L	R	O	H	P	R	B	L	U	C	K
H	H	Q	W	E	I	K	X	V	Q	E	E	Z	H
C	Z	K	C	T	A	N	P	E	H	Z	M	A	U

P	R	B	L	U	C	K	C	C	S	L	R	O	H

The resulting PT is on the next page.

ANKH PROJECT

WIDIA VERSION (Cont.)

The OTP substitution described on the preceding page resulted in this:

[illegible]

ANKH PROJECT

WIDIA VERSION (Cont.)

Let's do it sideways (the cipher I mean).

F

CT	Key
C C S L R O H	H O R L S C C
H H Q W E I K	K I E W Q H H
C Z K C T A N	N A T C K Z C
C O G K Y H A	A H Y K G O C
R Y P F Q N N	N N Q F P Y R
B V H U M O U	U O M U H V B
G R N M E H Z	Z H E M N R G

T H K G T C N	N C T G K H T
E B E V Y U U	U U Y V E B E
P O R B Q K A	A K Q B R O P
P E H Z M A U	U A M Z H E P
X V Q E E Z H	H Z E E Q V X
P R B L U C K	K C U L B R P

We get:

W	H	A	B	A	H	W
H	P	O	Q	O	P	H
Y	S	T	M	T	S	Y
J	N	I	K	I	N	J
Q	U	W	X	W	U	Q
P	R	S	J	S	R	P
F	I	T	D	T	I	F
H	C	S	S	S	C	H
W	W	T	K	T	W	W
S	P	G	M	G	P	S
D	O	U	J	U	O	D
X	M	S	X	S	M	X
F	U	O	V	O	U	F
P	D	P	B	P	D	P

Now doing the same
but without the change
from DIAWI to WIDIA
made at the outset...

ANKH PROJECT

DIAWI VERSION

F

C	C	S	L	R	O	H
H	H	Q	W	E	I	K
C	Z	K	C	T	A	N
C	O	G	K	Y	H	A
R	Y	P	F	Q	N	N
Y	V	A	H	F	O	U
G	R	N	M	E	H	Z
Z	C	U	J	E	K	I
D	H	A	Q	D	C	N
E	B	E	V	Y	U	U
P	O	R	B	Q	K	A
P	E	H	Z	M	A	U
X	V	Q	E	E	Z	H
P	R	B	L	U	C	K

This is what would appear at the same point if I had not transposed DIAWI to WIDIA. The characters in yellow boxes are the ones changed in the WIDIA version due to the transposition. I used the WIDIA version to complete the steps that then followed. But now there is a question about whether I should have done the transposition of DIAWI to WIDIA. So, here I will do a Quagmire III substitution *encrypt* using the above version as CT and its flipped version as keyword.

See next page.

D	O	U	J	U	O	D
X	M	S	X	S	M	X
F	U	O	V	O	U	F
P	D	P	B	P	D	P

Essential comments:

Since adding the Z to the front of K4, several steps have transpired. Clues or inferences led to each successive step. I used all three keywords that were on my list to try. One of them led to clues that resulted in changed text when I tried it and the other two resulted directly in changed text.

When I say several steps, I mean that I got through all steps because the clues I arrived at along the way were the same for both the WIDIA version and the DIAWI version. The clue to the scytale occurred as a result of an inference that appeared in the result of step "P" in both versions. It was not blatant, but I followed up on it. The resulting text, step "R", had COIL in the bottom left corner, horizontally, GATE in the bottom right corner, vertically, and EOF (end of file) in the upper left corner, horizontally. So the scytale is going to be wound bottom to top, right to left or right to left, bottom to top.

I took one other step (next from step "P") by doing another substitution inferred to by a comment Sanborn made in one of his interviews. This particular step ("Q") demonstrated to be correctly done by easy analysis of the result. I used the K1 CT as the keyword. I think this step may be part of the K5 solution, as it does not seem to relate to the other goings on.

So, now the question is, how do I apply this scytale thing? The letter frequencies after step sixteen do not support it being English. For instance, there is only one E in the whole text. So, the scytale would not be used directly with the text after step sixteen. I am taking the scytale clues seriously as they point to a nearby solution. But, what to do with the result of step sixteen?

Because all of the pertinent clues and results are encountered in both streams WIDIA and DIAWI, including the fact that vertical mirror image OTPs of "F" versions are identical, one has to conclude that both streams are necessary to arrive at a solution.
