

K4 Analysis, David McCrary

The Kryptos structure with the tableau side reversed and perfect shape is ideal for folding over and laying on top of the cipher side (That's nothing new, that's always been seen). But, what then? What does that do for you? You have a one-to-one relationship between letters, except the "V" on the bottom left of the cipher side, but still not much.

But, no reason to stop there. There is more that can be done after folding over.

First, If we look at K4, there is a couple of things that stand out. One being the letter from KRYPTOS present on the right hand side. You have KR (on line 1) then SO then YP (with the T of wrapped to the other side). Things would be in much more order if lines 2 and 3 were swapped. KR,YP, SO, and that also would make the left side column TUV (I'll show why that is significant in a second.)

Now that you have this, lets look at the bottom half of the tableau side when it folds over, it's in the orientation we already know:

```

NGHIJLMNQUVWXZKRYPTOSABCDEFGHIJL
OH IJLMNQUVWXZKRYPTOSABCDEFGHIJL
PIJLMNQUVWXZKRYPTOSABCDEFGHIJLM
QJLMNQUVWXZKRYPTOSABCDEFGHIJLMN
RLMNQUVWXZKRYPTOSABCDEFGHIJLMNQ
SMNQUVWXZKRYPTOSABCDEFGHIJLMNQU
TNQUVWXZKRYPTOSABCDEFGHIJLMNQUV
UQUVWXZKRYPTOSABCDEFGHIJLMNQUVW
VUVWXZKRYPTOSABCDEFGHIJLMNQUVWX
WVWXZKRYPTOSABCDEFGHIJLMNQUVWXZ
XWXZKRYPTOSABCDEFGHIJLMNQUVWXZK
YXZKRYPTOSABCDEFGHIJLMNQUVWXZKR
ZZKRYPTOSABCDEFGHIJLMNQUVWXZKRY
  ABCDEFGHIJKLMNOPQRSTUVWXYZABCD
  
```

But, why keep it there? As you can see now, the (TUV) of K4 can be slid up (well the whole cipher side can be) to overlap (TUV) of the tableau side

TUV Could be a combination of "T" is you position, and the reference to UV light that was mentioned in an earlier post of mine.

Cipher text side can slide up and down after folded over

Now of course you don't have to physically do this, but it was all set up to fall in the right orientation to do it on paper.

NGHIJLMNQUVWXZKRYPTOSABCDEFGHIJL
OHIJLMNQUVWXZKRYPTOSABCDEFGHIJL
PIJLMNQUVWXZKRYPTOSABCDEFGHIJLM
QJLMNQUVWXZKRYPTOSABCDEFGHIJLMN
RLMNQUVWXZKRYPTOSABCDEFGHIJLMNQ
SMNQUVWXZKRYPTOSABCDEFGHIJLMNQU
TNQUVWXZKRYPTOSABCDEFGHIJLMNQUV
UQUVWXZKRYPTOSABCDEFGHIJLMNQUVW
VUVWXZKRYPTOSABCDEFGHIJLMNQUVWX
WVWXZKRYPTOSABCDEFGHIJLMNQUVWXZ
XWXZKRYPTOSABCDEFGHIJLMNQUVWXZK
YXZKRYPTOSABCDEFGHIJLMNQUVWXZKR
ZZKRYPTOSABCDEFGHIJLMNQUVWXZKRY
ABCDEFGHIJKLMNOPQRSTUVWXYZABCD

This now gives you a new one-to-one relationship with the letters (white is K4, blue is overlapped tableau letters):

																										O	B	K	R	
																										M	N	Q	U	
T	W	T	Q	S	J	Q	S	S	E	K	Z	Z	W	A	T	J	K	L	U	D	I	A	W	I	N	F	B	N	Y	P
T	N	Q	U	V	W	X	Z	K	R	Y	P	T	O	S	A	B	C	D	E	F	G	H	I	J	L	M	N	Q	U	V
U	O	X	O	G	H	U	L	B	S	O	L	I	F	B	B	W	F	L	R	V	Q	Q	P	R	N	G	K	S	S	O
U	Q	U	V	W	X	Z	K	R	Y	P	T	O	S	A	B	C	D	E	F	G	H	I	J	L	M	N	Q	U	V	W
V	T	T	M	Z	F	P	K	W	G	D	K	Z	X	T	J	C	D	I	G	K	U	H	U	A	U	E	K	C	A	R
V	U	V	W	X	Z	K	R	Y	P	T	O	S	A	B	C	D	E	F	G	H	I	J	L	M	N	Q	U	V	W	X

Now, move on to NYPVTT, they are no longer in position 64-69, well maybe this means that those lines just needs to be put back after its decoded. So NYPVTT can still translate one-to-one to BERLIN. (it will be BER at the end of line 2, and LIN at the start of line 4 which can be switched back into its normal position afterwards)

This is where I feel I am getting close. When attempting my method of backwards calculating the letters, NYPVTT against BERLIN, I want to see **QUVVUV**. Because those are the letters of the tableau side that are one-to-one with NYPVTT.

The formula I'm using has no idea what the tableau side is, BUT its giving me several interesting results as I slide the starting point of my letter to number reference:

MCEEBE (E repeating in position 3,4,6)

NVFFWF (F repeating in position 3,4,6)

EOWWTW (W repeating in position 3,4,6)

I know I'm not getting the repeating 2 & 5, but the fact that 3,4,6 is repeating , its not a random event.

The fact that I'm getting this repeating letter in the exact position I want to see V of QUVVUV, can not be coincidental (I think it's like 1 out of 17000) and its happening at several positions. My formula is not doing anything to force this text, it's merely taking the cipher text letter and performing a math function with the known text to produce a new letter. And the function can basically be reversed. Meaning if I take the result letters (MCEEBE) and put them in the formula, I'll get BERLIN back, but MCEEBE means nothing, I need QUVVUV for it to hopefully all fall in place.

It may all boil to just finding a keyword to insert in my text to number reference that feeds my formula to jumble the order correctly. But the fact that it's spitting out these repeating letters at 3,4 and 6 makes me feel that it's so close.

David McCrary (LMDAVE)
