

DeKRYPTOS

K4R2B

DRAFT

By: Joshua.tully@gmail.com

Method: Steganography / physical modification/ riddle

Carrier Text: K2 (PT and CT)

Storyline: Standing at the entryway of King Tuts' tomb;

Clue

- Steganography cipher text is known as a “STEGO KEY”
- Jim revealed **ZFPK** decodes to **LOCK** (meaning the K decodes to K), so K/K is our starting point(index 126).

STEGO TYPE - 1

- Locate your starting position(**A**) within the mask layer.
- Find the next instance of the K4 character (**B**).
- The decoded letter (**C**) is that position, but in the (PT)

STEGO TYPE - 2 (not used for this section)

- Locate your starting position (**A**) within the mask layer.
- Move over by K4 alphabet value (**B**)
- The position you land on is your decoded character (**C**)

T 4	C 9	H 14	N 19	X 24	

(KRYPTOS alphabet values).

(KRYPTOS K4 Block Matrix).

STEP 1: Reverse the K2 mask (Black CT) layer as seen below.

```

STEP 2: Focus on **WGDK** of your K4 block matrix.

STEP 3: Reverse your K4 block text to read **KDGW**.

STEP 4: Locate K over K, this is your insertion point.

STEP 5: Solve for **KDGW** by using type-1 STEGO method from right to left.

```

FOURTH W/T
THIRD G/E
SECOND D/R
FIRST K/S

STEP 6: Delete the Cipher Text **X** at position 131 and adjust text.

STEP 7: Looking at **ZFPK** of the K4 block matrix.

STEP 8: Reverse the key to read **KPFZ**.

The image shows a grid of cipher text with several rows. A red 'X' is placed over the character 'F' in the third row, column 13. A red line points from the text 'DELETE THE X' to this 'X'. A blue line points from the text 'FIRST K/K' to the 'F' in the third row, column 13. A blue line points from the text 'SECOND P/C' to the 'P' in the third row, column 14. A blue line points from the text 'THIRD F/O' to the 'O' in the third row, column 15. A blue line points from the text 'FOURTH Z/L' to the 'Z' in the third row, column 16. The grid contains the following text:

```

STEP 9: K over K is your first decode, continue with the type-1 STEGO method.

STEP 10: Reverse **KCOL** to read **LOCK**.

If you are using DeKryptos.com you can use the following:

Step 1: Press the II in the top left to load the K2 chart.

Step 2: Make sure you have the cipher (black) text layer selected.

Step 3: Reverse your masking text (Black CT).

Step 4: Set marker to position 126.

Step 5: Select the STEG tool in the top right corner.

Step 6: Click

to Load STEG text from the STEG field.

Step 7: Reverse STEG text.

Step 8: From right to left, decode using a type-1 STEGO method.

Step 9: Reverse STEG text in the STEG tool.

Step 10: Press the scribe button to apply.

Step 11: Click

to load STEG text from the STEG field.

Step 12: Reverse STEG text.

Step 13: Delete the X (pos 131) by clicking on the text then press the delete

button.

Step 14: set your cursor to position 86.

Step 15: Press the STEGO type-1 method 4 times.

Step 16: Reverse the STEG text again.

Step 17: Press the scribe button to apply decode to the STEG field.
