

KRYPTOS

PREAMBLE

DRAFT

-Joshua D. Tully

Introduction:

During the 2013 Kryptos dinner, I was able to ask Jim Sanborn the following:

Me: The Kryptos sculpture, what does it represent?

*Mr. Sanborn: The petrified tree was a symbol of a forest that was cut down to build the CIA headquarters; it was quite controversial at that time. **There was also talk about how there were tree frogs in the little cracks of the fossilized tree when he picked it up and that he could only travel 55MPH from Arizona to Virginia in his crappy rental truck.***

***Layout** - The stones and main sculpture form lines that cut through the CIA building, as if to expose it. Someone else mentioned that there may be some significant historical lines, but I did not register because it did not come from Mr. Sanborns himself.*

***Granite slabs** – Represent the history/layers of encryption at the CIA much like a book, the layers can be peeled back.*

Overview:

For the sake of brevity, we will assume you have a working knowledge of the first three solved portions of the KRYPTOS sculpture.

The overall goal of this paper is to remove the shrouds of secrecy to one of the greatest spy game of a lifetime. Designed by Jim Sanborn and presumably with Dan Brown, this enigma has been placed in the courtyard of one of the most secure buildings within America. Lead by Elonka Dunin, the group has amassed a great deal of clues and talent.

Refer to the Kryptos Charts below for a visual aid. We will be using a table much like this but only two rows and swap PT layer for CT(you will later see). The plain text will act as the information carrier and the Cipher Text layer will be the mask. Along with how you are to modify the mask, shift the rows, and interpret clues; you will also be urged to acknowledge that the rabbit holes run deep and you really need to set your boundaries and behaviors accordingly.

[illegible]

Type-1 Stego- From your current position (**A**), locate your next K4 letter within the Cipher Text(**B**). Your decoded letter is in Plain Text (**C**).

A diagram of a chromosome. A horizontal black bar represents the chromosome. On the left end is a circle labeled 'C'. On the right end is a circle labeled 'A'. In the middle, there is a grey triangle pointing to the right, representing the centromere. Below the chromosome, a bracket spans from the centromere to the right end (A), and a circle labeled 'B' is positioned below this bracket.

Alphabet/Index (B)																									
K	R	Y	P	T	O	S	A	B	C	D	E	F	G	H	I	J	L	M	N	Q	U	V	W	Z	
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	

The hard part is believing what you are seeing, this cipher is quite sloppy and as you know, most effective at the same time. You can only build certainty by applying learned methods plus something new to other blocks. I find that the clues really pop out only after you have solved the key block.

I believe you will need to be aware of Howard Carters' journal, the decode matrix(incomplete), and the three previously solved sections + the Morse code.

Howard Carters journal entries from 1922 are available via web search which details the excavation and exploration of Kin Tuts tomb. So far this appears to be the case but do not let this set your boundaries.

The below table was inspired by the Berlin Clock clue; it is incomplete but has proven truthful thus far. It should be noted that this cipher should be solved in reverse order from easiest (Bottom) to hardest (TOP).

Bottom row **CAR** may represent many things, one of my favorite is that of Howard **CAR**ter as he excavates the DIG, watching him slowly inch closer and closer through the tomb of King Tut. It is not deciphered right away, I don't know when, I don't know where, but if I had a guess it would be after you cross the finish line.

NOTE! Blank regions are yet to be discovered, missing sections were omitted but is believed to still be part of K4.

NOTE! Because you are deciphering in reverse direction, I chose to leave out the two upmost rows for the simple fact that it wouldn't fit on this page correctly.
