

A hidden instruction in K1?

Adding the „invisible“ layer of complementary letters to K1 seems to reveal a sort of instruction on how to decipher the first few letters of K4:

```
QTMKYRDM cipher letters (Layer 4)
IMPSESTP key letters (Layer 3)
OFIQ LUSI complementary letters (Layer 2)
UHESCOQE plain letters (Layer 1)
```

```
GQ?LOBKRU cipher letters (Layer 4)
  YE O O O O key letters (Layer 3)
  XI Q PUVJ complementary letters (Layer 2)
  YESWOTD plain letters (Layer 1)
```

(The mistaken Q on layer 2 in K1 marks a position in K4 and ...)

```
QTMKYRDM Layer 4
IMPSESQP Layer 3
OFIQ LUJI Layer 2
UHESCODE Layer 1
```

```
GQ?LOBKRU Layer 4
  YE O O Q O Layer 3
  XI Q PUAJ Layer 2
  YESWOND Layer 1
```

(can also be used as key letter to fix both mistakes on layer 1 -
COQE → CODE | WOTD → WONDerful)

Maybe this is just the beginning of the instruction.
