

This looks like a "3" to me. I think this is actually "Step 3" to his encryption and somehow he pulls in K4 here. Hmmmm.

Note the line drawn under the word "IT". This is the same "IT" that sticks out at the end of the 23rd row on the statue, the longest row. DIGETAL INTERPRET AT IT?

The 8 blobs here could be magic marker or wax pen drawn over the plastic sheet to conceal whatever is underneath. Other than "Abscissa", are there any other 8 character (numbers or letters) clues? What about the eight strings of Morse code that have extra dits (Es). There happen to be eight...If my orientation is correct, the statues come up out of the ground at an angle pointing away from the CIA. If you were walking out of the CIA building, reading from left to right, you would see the following groupings of extra dits: 3,1,3,6,4,5,3,1. If you think the "E" in digEtal" is supposed to be an "extra" dit, you would see: 4,1,3,6,4,5,3,1. Furthermore, if you are under the impression that the "S" in "Position" isn't really an "S" because one of the dits is under the loadstone, you would see: 4,3,6,4,5,3,1. Note sure which one is right, or if it has anything to do with what is hidden under the black blobs.
