

In my opinion, the first step of K4 is to put it into 24 columns.

*Also adding some arguments for 7, which I believe will come into play at some point as well.

Reasons in no particular order:

- 1) dYAhR could just mean DAY HR (24 hours in a day, signal to start with 24 columns)
- 2) The first step to solving K3 was to put the text into rows with 24 columns.
- 3) Assumed folds on the K3/K4 sheet from the Nova video are after the R in ENDYAHR and before the D in DYSHNAI. This would give us 24 columns from the first letter to the second fold, and 24 columns from the first fold to the last letter. 7 columns outside.
- 4) Sanborn's handwritten sheets of K1/K2, there is a noticeable color change in the shading of the last 7 columns.
- 5) Using 24 could fit Sanborn's quote "...reveals itself over time".
- 6) CLOCK is one of the cribs/hints given to us.
- 7) Hours and seconds found in K2.
- 8) NYT articles have graphics of the text in rows of around 24. I think these have been subtle hints over the years telling us to concentrate on 24.
- 9) The most recent graphic of K4, created by Sanborn and posted to Wired, shows the 97 characters in rows of 24 columns. I think he was easing us into 24 with previous articles, but at this point has just said "fine, here it is" and given us K4 in 24 column format.
- 10) NORTHEAST was given at the 26th position, later EAST given at 22nd position. K in BERLINCLOCK is 24 positions from the end of K4.
- 11) Q in QLUSION is 7 positions from the end of K1. Misspelled U in underground is 24 positions from the following "sentence" (including the "X").
- 12) "24/7" could symbolize the CIAs philosophy to be watching 24/7. (IDK?)

Coordinates in 24 columns and 12 columns. Find it interesting there's no overflow from one line to the other. Each line can pretty much be read on its own.

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24
