

This letter string was found in the solution to K0. After trying it across the entire Key (not including spaces 64 to 74), these 2 places were the only locations, which did NOT provide gibberish as output! Upon careful reflection, I determined the string starting at space 77 was the most like the Sanborn plain text that we have seen so far! This format includes a "q" denoting a question prior to this string, a misspelling, a lack of acronyms AND a corresponding one-to-one relationship between the cipher text and the plain text!!

****VIABLE "ETRANSEWJ" STRINGS**

@77

E	T	R	A	N	S	E	W	J
4	19	17	0	13	18	4	22	9
