

BERLINCLOCK starts at position 64, EASTNORTHEAST starts at position 22 -- may indicate a key length of 21 if JS was very deliberate in his choice of cribs.

2 explicit JS statements: All major sections end with an "X" & K1 was very carefully worded.

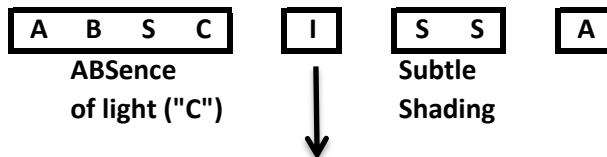

"Between subtle shading and the absence of light lies the nuance of illusion"

A message that is hiding additional information is an illusion.

A "nuance" is a subtle change.

K1 is missing an ending "X".

ABSCISSA can be parsed to:

As presented, the last 3 characters of K1 are encoded with PAL of PALIMPSEST. The next Key letter is an "I". "X" encoded with "I" is "G".

Column Row Transposition of K1 after adding "G" to the K1 ciphertext:
