

What I think END - YAR means.

I think it's a clue on how to apply a mask for an OTP. YAR backwards is RAY, as in an electromagnetic transverse wave. The END means that column 1 is the end, or that you should apply this pattern, 3 across then 4 up, to start the wave at the other end, column 48. Obviously the H gets in the way here - but I think that it must be excused. And since RAY is spelled right to left you should apply the OTP and mask right to left.

If you take K3 when it is laid out in rows of 48, and then rearrange it into a wave you get the following.*

In columns 42 to 47 of row 6 we get our EIOYLE, Which applying the ciphertext NYVPTT from right to left for an OTP solution yields BERLIN.

Lets put K3 in the other phase:

If you look in column 1 toward the end - we get, looking at columns 26 to 48, we get the following:

BSEDIACAHTTEYULWPIESLL

Notice the last 8 columns: L-WPIES-LL

Or L-SPIES-LL, spies surrounded by L's.

After that start; I think that the first part of K4, OBKRUXOGHULBSO..., goes with the UYET...
