

Kryptos K4 Solution and Procedure

To Yahoo User Group from Ibn Şifre,

A Forward: The Shadxws:

The world of spies is a world of shadows and mirrors. A world in which truth is elusive. A world where much of the data gathered is an incomplete picture of the total situation, and riddled with mistakes. This elusiveness, I believe, is one of the main themes of Kryptos. Below, I report what I have found. The deciphering is verifiable, and the process is repeatable. But, unfortunately in this world there is no decipherment algorithm that tells whether or not what is reported as plaintext is the truth - or a lie - or a bit of both. The decipherment and interpretations of what is found are mine and mine alone. I might, inadvertently, imply that a villain is good or a hero is a villain. I will do my best, but undoubtedly what you will find below is riddled with mistakes. As the Creator is the Most Merciful, the Most Forgiving, I must beg your pardon.

One other note: please keep in mind that decipherment of Kryptos reads like a spy novel, filled with riddles, sudden realizations, plot twists, multiple interpretations of information, different parties claiming that they are telling the truth and the other is lying, and a significant difficulty of even knowing who is who.

In this paper the following notation is used for indicating how a text is encrypted or decrypted. The cipher is a Vigenere Cipher which uses the KRYPTOS alphabet as was used in K1 and K2:

For encryption: $ENC(key, plaintext) = ciphertext$
For decryption: $DEC(key, ciphertext) = plaintext$

Examples:

$key = ELYOIE, plaintext = BERLIN, ciphertext = NYPVTT$
 $ENC(ELYOIE, BERLIN) = NYPVTT$
 $DEC(ELYOIE, NYPVTT) = BERLIN$

For ease one could use one of the interactive keyed Vigenère solvers on the web like Rumkin's Keyed Vigenère Cipher at <http://rumkin.com/tools/cipher/vigenere-keyed.php>

Now another point about shadows: That the steganographic clues of Kryptos' ciphertext seem to indicate the following:

Encrypting 'ENDY' of ENDYAHR with key 'V' yields:

$ENC(V, ENDY) = AISX \rightarrow A IS X$

And since 'ENDYA' is quite close to 'ANDYES' of John 8:32, 'And Ye Shall Know the ...' take 'DYES' and also decrypt with key V :

DEC(V, DYES) = HSID -> D IS H (backwards)

But in other places, we have many reasons to think that D opposes H. Also, the Stenographic clues of Kryptos imply that S and W go together, which give us:

S and W
H ~ D
A is X

which is an anagram of SHADXW, or SHADOW with the X covering the O. The Cyrillic Projector, Kryptos' sister work, uses the word TEHb, or shadow in Russian, as its cryptographic key; the pronunciation of which in English sounds very close to the word "ten". The number ten being X in Roman numerals suggest the following interpretation:

A is: X -> TEN -> TEHb -> Shadow

A is Shadow.

The Palimpsest as a One Time Pad:

Start with K3 and arrange it in 7 rows by 48 columns as shown in Fig 1-1.

	1	2	3	4
	123456789012345678901234567890123456789012345678

Fig. 1-4, W

Note the steganography in the columns:

C24: DREWIED

DREW I ED

Jim and Ed Drew (masks)

C20: DAP

C19: ASOADO

C18: ILLMNSE

C17: ANSAIDI

DAP A, SO A DO FILL MN SE ANS AID I

Instructions: A pad (reversed), so A do fill in, See answer, Aid I. They used a "One Time Pad" with a 'A' as its letter mask. "SO A DO FILL IN"; Fill in the mask with K4 ciphertext,

K4-CT, i.e use pad letters as a key for K4-CT. See the answer, and aid Jim. The pad is reversed, which we did already in the step above. (Note that I also refer to this as the K4-HX pad)

C16: **CNETADM**

C15: **AREHEDE**

ARE H ED EM D AT ENC

Note a switch in the direction of reading; C15 forward then C16 backward.

Our H, Ed and Me, D at Encrypt. There is another mask 'H', start encryption at D; A clue to A Riddle X.

C02: **OEH**

C01: **LTYSAHW**

W HAS Y T L, HE O

W has why T Lied, He is O (T is O).

As you might notice, there is more in there but it easier to see when one understands more.

And another clue, when part of it is decrypted with 'V':

DEC(V, DREWIED) = HOIRNIH -> (backwards) H IN R IO H

H in our XH, There are two letters using the same pad, a H and an HX.

Main decryptions have steganographic clues along the edges of the masks indicating what to draw for the mask and giving other important information. In K4, the letters H, HX (also the A pad as discussed above, formed by two A's laying on their sides, i.e. the negative space around the H), O, P, and Y are the basic masks that I have found.

Part 1a: K4-HX

Transpositions Step:

Take the rows of W and arrange them as follows:

R5:R1

R6:R2

R7:R3

and as shown below in W1, Fig 1-5:

1 2 1 2

123456789012345678901234**1**23456789012345678901234

R5:R1 AOREACAETSMBELEAINDEPRAILLSEIPWLUYETTHACAIADESBD

R6:R2 **H**ELYOIETIROWITDDDSOFTEO**E**TMWMLKRIIPLLDYRNNLSAEOG**R**

R7:R3 **W**HOFEETTSSEYGEMIEFTANED**Y**ETDVTRAHNELNHEESLOPIR**M**E

Fig. 1-5, W1

Steganography of K4 HX Pad Mask:

Again, notice the clues in the steganography in Row 1, Columns 1 to 8 of W1, as shown in Fig. 1-5, spell out 'L WPIES LL'. Maybe it means 'L SPIES LL'; spies surrounded by L's. Also notice the last column of R5-R7 and the first column of R1-R3 spell out 'Y T LIED'. Last, notice that the first columns of R1-R3 and R5-R7 spell out 'DREW H, A' - so draw an H! (and some A's).

1 2 1 2

123456789012345678901234**4**123456789012345678901234

R7:R3 WHOFEETTSSEYGEMIEFTANEDYETDVTRAHNELNHEESLOPIRME

Fig. 1-5b, W1 with H drawn on it

OTP, One Time Pad, Decryption Step:

The next step involves treating W1 as a pad and K4 as a ciphertext as part of a OTP, one time pad, encryption scheme. In this scheme, one uses the pad mask as a 'key' matched with parts of K4 as the ciphertext to recover the plaintext using the Kryptos Vigenère cipher, as was used in K1 and K2.

For each of the letters, I have tried to adopt a similar way of showing how to decrypt. First I show the letter pad mask, highlighted in colors, as in Fig 1-6, the HX Pad Mask. In the next figure, I show the K4 ciphertext separated out into rows and colored the same as the parts of the pad mask, as in Fig 1-7. The colored part of the pad mask form the keys used to decrypt the the same colored part of the ciphertext. Next I show them all together, the keys (pad mask), followed by the corresponding ciphertext, and last the plaintext found after decryption. The HX version of this can be seen in Fig. 1-8. I have laid it out such that one can easily use an online tool such as Rumkin's mentioned above. For that specific tool, one should set to Decrypt or Encrypt, depending on which one is doing. Sometimes one needs to Encrypt to get the plaintext used. In such cases I have denoted the font in blue instead of black. Then be sure to set the Alphabet Key to 'KRYPTOS', and copy and paste the keys into the 'Passphrase' box, and copy and paste the ciphertext into the 'Your message' box. Then one can read the decrypted message below.

R5:R1 AOREACAETSMBELEAINDEPRAILLSEIPWLUYETTHACAIADESBD
R6:R2 HELYOIETIROWITDDDSOFTEOETMWMLKRIIPLLDYRNNLNSAEGR

Fig. 1-8

Now re-arrange by flipping the rows to get P1 as shown in Fig. 1-8,

DSIWLLLVSHZAWKW	YPONBHZEROABUW
ZXFANBCKDFMNDBYANURM	BERLINHDEXPBCKJIMZTO
EFGRMOCKISWDXO	VDRIDDLPIOIAQJ

Fig. 1-8, HX PT''

Misspellings Step:

Guess the misspellings as follows in Fig. 1-9.

Don't worry, there are ways to tell if you have the right ones. The rows labeled with 'HX MS' are the rows of the correct letters where a misspelling occurs in the plaintext, as best I can guess. The rows labeled with 'HX PT' are the plaintext rows from the OTP step. The rows labeled with W are the rows from the pad text and show the corresponding pad letter where the misspelling occurred in the plaintext.

Figure 1: Schematic representation of the protein structure of the HX-PT and W-R1:R5 domains. The figure shows two panels, (A) and (B), each with three rows of protein sequences. Panel (A) shows the HX-PT 1, HX-PT 2, and W-R1:R5 sequences. Panel (B) shows the HX-PT 1, HX-PT 2, and W-R5:R3 sequences. The sequences are color-coded to represent different structural elements: red for alpha-helices, green for beta-strands, orange for loops, and blue for turns. The sequences are aligned to show conserved residues and structural motifs. The HX-PT 1 sequence is shown in red, HX-PT 2 in green, and W-R1:R5 in orange. The HX-PT 1 sequence is shown in red, HX-PT 2 in green, and W-R5:R3 in orange. The HX-PT 1 sequence is shown in red, HX-PT 2 in green, and W-R5:R3 in orange.

Fig. 1-9

Which gives us HX-PT, our K4-HX solution to the 97 charters as shown in Fig. 1-10

Fig. 1-17

Examining the misspellings we can find further messages, reading going across:

LOC WY D,
Locate Why D

Which gives us H Plaintext, or H PT, our K4-H solution to the 97 characters as shown in Fig. 1-18:

PQO X LYING WHY KP Q HIS LM J
 TO IKES DCI Q H T Q KGB DOCS

Fig. 1-18, H PT

Part 2: K4-O

Transpositions Step:

As in part 1, start with W in Fig 1-3, but this time re-arrange the rows as follows:

R4:R3

R1:R6

R5:R7

shown below in W2, Fig 2-1, and draw the letter 'O' on it in the following way:

	1	2	0	1	2																																										
	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4

W R4:R7	SAOLLSDLRLRERNTH TAMANHSYWWHOFEE TTTSSEYGEMIEFTANED			

Fig. 2-4

Read off the misspelled letters of Fig 2-4 starting by going up on odd rows, down on even, right to left for the right set of 24 columns and continuing then to the left set of 24 columns by going down on odd rows, up on even, to get the following,

KI**Q** P, **T**YH SET, OO MOLE CIA R D

K**I**M P, **O**YH SET, OO MOLE CIA R D

Kim Philby, OYH [are a] SET, OO [is a] MOLE, CIA ouR D

Information: K and P is for Kim Philby who is our double O mole.

The letters, OYH, are a set, and the CIA is D, i.e. the letter D stands for the CIA (possibly the CIA under Dulles). CIA RD can also mean CIA Riddle or 'OO MOLE [in the] CIA, Read'.

And following across, the letters of the pad where those misspellings occur we can get:

IN H D **A****E**S, SET D'S T, D R **A****F**S Y G T

IN H D **A****N**S, SET D'S T, D R **A****N**S Y G T

We get the following K4 O Plaintext, O-PT. Note that all but the last line of O-PTb should be reversed:

K4 O-PTa:

BR ACT OF LOST LOG A RD Q

LRQ V ENCR L BURIED E VS SOV

JIM S AGAIN IS LRQ Q

I RQ U X ENDY, H PIECES X O ONE P

K4 O-PTb:

I NEED B IN S WEST B TX JS O Y H

J LAST H, P TX KEY.

Steganography of K4 Y Pad:

Notice the letters in the center, reversed:

ORITE IO Y L **E**HD B'S E **D**IA C A

WRITE IO Y L **B**HD B'S E **C**IA C A

Write X, why Lie Berlin Head, B's E, CIA see answer.

Misspellings: O WEB D C

And also if decrypted with the key 'T'

Dec (T, ACAIADESBD HELYOIETIRO) = POPEPSAYTS DAGXREAKEWR

P - O PEP SAY T, S DAG X REAKE WR
P - O PEN SAY T, S DIG X READ E WR

As for the outside edges; on the right:
R, ME AN ED and the left: ALSO A R

So, the two different sections are drawn like R's.

Part 3: K4-Y

Transpositions Step:

As in part 1, start with W in Fig 1-3, and arrange the rows as follows:

R4:R5

R2:R6

R3:R7

shown below in W3, Fig 3-1, and draw the letter 'Y' on it in the following way:

1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4

Fig. 3-2, K4-Y Ciphertext

Done as before, please note that the left side, in blue should be encrypted:

Fig. 3-3

Guess the misspellings as follows in Fig 3-4. The rows labeled with Y MS are the rows of the correct letters where a misspelling occurs in the plaintext, as best I can guess. The rows labeled with Y PT are the plaintext row from the decryption step. The rows labeled with W are the rows from the pad text and shows the corresponding pad letter where the misspelling occurred in the plaintext.

Fig. 3-4, Y-PT Misspellings

The misspellings of the decrypted part of the letter 'Y', on the right. Read off the letters going down then up, left to right:

B IS T LSP, K WHG

B IS T LSD, K [is] WHO, *B IS True? LSD; K is WHO (G)*

Misspellings: **P,G DO**: *A clue to the next letter masks, the P and G.*

The misspellings of the encrypted part; the letter 'N', on the left. Read off the letters going down then up, right to left:

D'S GOAM A Q SHA

D'S GOAL A X SHA-dow, *The CIA's goal: answer is X; answer is a shadow.*

Misspellings: **LM Q X**, *LM: Shadows?*

We get the following K4-Y and K4-N Plaintext:

K4 Y-PT:

J BUG INFO: SLAIN R P IS WHO GB, ANS P X

A SENT SPY T JFK THX, BH Y

K4 N-PT:

SEE HOW, CALL ALT Y, GB VS O, CIA X VS III HD OF D X

A OOT KIM P, U Q

Steganography of K4 Y Pad:

Steganography of the edges of the decrypting part of the letter 'Y'. Read off the letters going down then up, left to right:

R5 AOREACAE TSMBELEA INDEPRAI

R4 HELYO IETIROWIT DDDSOFTEOE

R7 WHOFEETTT SSEYGEMIEFTANED

A HE OR LYE A, O C - A E, DD D'S OF-TEA OE, I ED

A HE OR LIE A, O C - A E, AD D'S OF-TEN YE, I ED

Answer of He or Lie Answer, O see - answer [should be] E, Allen Dulles and CIA [is] OF-TEN YE, I [and] ED . The CIA is often ye, and the CIA is of Ten (of the shadows)

Misspellings: **YDAO - IANY**:

Y D AOI ANY

Why D - AX Answer why; or A N/Y - Answer? No/Yes

Steganography of the edges of the letter 'N'. Read off the letters going up then down, left to right:

```
R4 SAOLLSDBLRERNTHHTAMANHSYW
R2 TMWMLKRIIPLLDYRNNLSAEOGR
R3 YETDVTRAHNELNHEESLOPIRME
```

YT SAME TWO LM D **V****L** LSD BL**R**E R, A **E**O GR
NT SAME TWO LM D **V****S** LSD BL**U**E R, A **D**O GR

*Not [the] SAME, [the] TWO LM, D VS LSD, BLUE ouR A, DO GR.
Not the same are the two LM's, CIA VS LSD, A (Allen Dulles or James J Angleton?) is Blue (sad). DO GR (a clue to one of the next letter masks, the G (OGR).
LSD: Lysergic Acid Diethylamide, or Acid.*

Misspellings: **YLRE**
NSUD

N-Y **L** SURE **D**

Yes/No Lie [are you] SURE D? Yes/No Lie are you sure [about LSD] CIA?

Steganography of the K4 Y Ciphertext:

Note that column Y3 is not used. Reversed it says:

SS K**G****N** R P Q

IS K**G****B** R P Q, *Is the KGB our P? (Our Ye, since 'Q YE P'), the 'N' misspelling suggests no.*

Misspellings: **BINS**: *BINS as in binaries or "B in S"?*

Part 4: K4-P

This letter is a bit strange, it starts off as a 'P' and ends up as the letter 'E'.

Transpositions Step:

As in part 1, start with W in Fig 1-4, but this time re-arrange the rows as follows:

R2:R6
R5:R3
R1:R7

shown below in W3, Fig 4-1, and draw the letter 'P' on it in the following way:

	1	2	0	1	2
	123456789012345678901234	123456789012345678901234	123456789012345678901234	123456789012345678901234	12345678901234

Fig. 4-4

The misspellings of the decrypted part of the letter 'E' with the letter 'P', on tRead off the letters going on the top row going across right to left, then the second row going left to right, and the third row going right to left again :

Q A IS L/T ANS SJ TXS Q U, B-Y-G II, TNX

? A is Lie/Truth Answer Jim S. Texts? You , BG's why is two. Thanks. What is your answer to 'A is X' from Jim S's texts? You? GB's why is two. Thanks.

While GB is George Blake, here I think that it should be interpreted as B and G. B for Anthony Blunt and G for Anatole Golitsyn. The two reasons that Kryptos presents for why Penkovsky died.

The misspellings of the decrypted part of the letter 'Y', on the right. Read off the letters going down then up, right to left:

E TELL Y T MA^OE D V E, ITS OI, E DET N

E TELL Y T MA^DE D V E, ITS OI, E DET N

E Tell why T made D Vs E, Its IO, E determine N

Enlighten, Tell why T made the CIA Vs Enlightenment, Its Shadow, for E determine the letter N (in section 3, K4-Y).

Or: Tell why T made the CIA not want to reveal the truth, It was its shadow.

We get the following K4 P Plaintext, K4 P-PT:

K4 P-PT:

O BG KEY J HUGE BUG JIM IS KM Q Y WE G RUS END Y SIS D Q C CIA
POS IN S WD VZ LM X F TELL A ENVY IN MSG JS

Part 4: K4-E

Carryout Transpositions Step:

This is strange, notice that by using from P-CT, Fig 4-2p we can use rows P2 and P9 to transform the P into the letter E in the following way.

		1		2		0		1		2														
	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4

Find, JS, Penkovsky verses Lie, this is why

PT 4: **P**OS P QIL J, **T**NX W US

*Position on Penkovsky? (a Lie) J, Thanks DCI Webster, us (Jim and Ed)???
(normally W can mean Allen W. Dulles - but this interpretation doesn't make sense to me)*

And the unused text from K4 CT? Reading up:

HUKGZSKGB -> **H**, UK, G **Z**S KGB
D, UK, **G** IS KGB

The CIA, UK (SIS) are Grey [and] KGB and also G is KGB i.e. G is used for short, KGB.

The Drawings:

Listing the letters we have found

A HA OR NYEP OR G X - O IIII which looks a lot like the following:

A **H**A OR NYE**P** OR G X - O **I**III
A **D**A OR NYE**T** OR G X - O **F** **O**UR

'Da' would be yes in Russian, and 'Nyet' would be no, thus giving:

Answer 'Da' (yes) or 'Nyet' (no) or G (grey) X - O (Penkovsky) [is] OUR Fault

The Cast:

H, HAR, K, KP, KM:

*Harold Adrian Russell "Kim" Philby or HAR Kim Philby
Kim from KIMBALL O'HARA - Kipling's Kim*

B, GB, BG:

George Blake (born George Behar)

B

Anthony Blake

J, JIM, JIM S, JS:

Herbert James Sanborn Jr, or just Jim Sanborn

ED:

Ed Scheidt

D:

CIA

S:

SIS

BH:

Berlin Head, DCI Allen Welsh Dulles - or just a reference to a DCI.

G:

KGB or in one case Great Britain, or Anatole Golitsyn

O, P, T, PO, OP:

Oleg V. Penkovsky

CV or V:

Cambridge Five spies

V:

Also it can mean Verses

W:

Also Allen Welsh Dulles

WW: DCI William Webster

KM:

KIM PHILBY

L, C, Y, A and E

In most places L is for LIE, C is for SEE, Y is for WHY, A is for ANSWER and E is for EXPOSE - or if you wish "ENLIGHTEN"

And also keep in mind:

H JIM SANBORN, HAR "KIM" PHILBY, GEORGE "BEHAR" BLAKE and thus confusion.

Interpretations:

What follows are my best guesses to date - certainly not everything will be correct.
CQD! SOS!

Plaintexts and others:

HX PT :

D SIS LLL VS O-H-AWK WYE ON BH ZERO ABUZZ X
FAN B CQD FIND BY ANORM BERLIN HD EXP BCK JIM S
T REF, GS MARK IS WD X ODD RIDDLE IO IS Q J

D¹ SIS² LLL VS O-H-AWKward WYE³ ON BH ZERO⁴ ABUZZ⁵ X
FAN of B CQD⁶ - FIND BY AbNORMal BERLIN HeaD, EXPeCt BaCK - Jim S.
T is REFERENCE⁷
GS MARK IS WD⁸ X
ODD RIDDLE - 10 IS?⁹ Jim

1. D is short for the CIA, or the CIA under DCI Allen Dulles.
2. SIS: www.sis.gov.uk , The British Secret Intelligence Service, aka MI6
3. LLL vs OHW: LLL, maybe Lies, Lies, Lies or, "Tri-L" for trial, or "try L", or LLL is a letter mask for LSD, i.e. Lies, Lies, Lies, are covering up LSD.

If 'LLL' reads 'Trial' or 'Try L' then we may have:

ENC(L, OHWYE) = V OHNY

Maybe that means to 'V' 'OHNY' so (remember 'Level Two'):

ENC(V, OHNY) = RD I X

Maybe that means that we should 'X Riddle One' i.e. encrypt K4-H with an X.

A. So the first line could be read as CIA, SIS LLL VS O H WYE ON BH, ZERO ABUZZ X

O a reference to Oleg Penkovsky,
H a reference to H.A.R. "Kim" Philby,
WYE ON BH: (the reason) Why is known by the Berlin Head, Allen Dulles
ZERO ABUZZ: Zero could stand for O or be misspelled, for Hero - both referring to Oleg Penkovsky.
Penkovsky is ABUZZ (sent a BUZZ or a telephone call).

Allen Dulles the was head of the OSS in Berlin just after WWII.

B. Or could be read as CIA, SIS LLL VS OHW (AWK W), YE ON BHZERO, A, BUGZ X

CIA and the SIS's Lies, Lies, Lies Vs an Awkward WHO.

'Ye' as part of John 8:32 'And Ye Shall Know ...' which is carved into a wall on the OHB (Old Headquarters Building) in Langley. In which case YE and the letter A, maybe in SHALL, are bugs, i.e. are wrong.

BHZero: OHB written backwards, Old Headquarters Building, Langley, CIA
For the clue on why BUGZ see the misspelling for K4-H below.

6. FAN B CDQ: A Fan of 'B', must mean fan of Anthony Blunt. CQD is an old form of SOS. It could also be meant to be read 'Seek D'.

7. T (for Truth) is our reference point referring to 'T IS YOUR POSITION' in Morse code next to the loadstone. The compass is pointing SW - (maybe SW is short for the SIS and W (Allen W. Dulles))

8. GS MARK IS WD X - on the USGS Marker that was in front of the NHB, New Headquarters Building. On it is written the word (letter) 'X' (or a cross, depending on your point of view)

9. Odd riddle: yes this is. Ten is?

ENC(V, ENDY) = AISX

The "Answer IS Shadows" - our Riddle

HX PT: M1

Opinion:

Bismillahi Al Haqq il Ala,
(In the Name of God, The Truth, The Most High)

"AND YE SHALL KNOW THE TRUTH AND
THE TRUTH SHALL MAKE YOU FREE."

Jesus the Son of Mary, the True Messiah, Alayhe Salam
John VIII - XXXII,
The Gospel

The Biblical and Islamic Exegesis of "Truth" in this verse is that God is The Truth, that He is the One True God, the only One deserving of worship.

However, I think Jim is using this verse to refer to a different truth. Perhaps a truth that has long been hidden. In his version, who is Ye? Is it Kim Philby or George Blake?; Or perhaps Allen Dulles, or the CIA. The BUGZ A, and YE would yield for example:

AND Allen Dulles, SIS, CIA, X LL KNOW THE TRUTH AND THE TRUTH SHALL MAKE YOU FREE.

In this case:

YE = Allen Dulles

S = SIS, MI6

H => D = CIA

A = X

YOU = YOGA, Oleg Penkovsky

Hopefully, the bugs will be fixed and YE will mean all of us before too long.

Kryptos is a memorial to Oleg Vladimirovich Penkovsky who's initials form four of the first five letter masks used upon Kryptos: HYOP

HERO: CIA Codename

YOGA: SIS Codename

OLEG

PENKOVSKY

Oleg V. Penkovsky, who spied for us from the heart of the Soviet Union. The information given to us, the United States, by Penkovsky was of the most critical importance. It assisted our President, John F. Kennedy, during the Cuban Missile Crisis in properly assessing the situation of Soviet nuclear forces in Cuba, and helped bring the crisis to an advantageous end for the United States. What Penkovsky did, at

enormous risk to himself, quite possibly prevented a nuclear holocaust. To that we are all in his debt.

I believe another point Kryptos tries to convey is the "Elusiveness of Truth". The world of spies is one of shadows, mirrors, and deception. There is no deciphering algorithm which can measure the truth content of a message. It serves as a warning and lesson to those working in the CIA and the rest of our intelligence community: Be careful with interpreting information, and be diligent. For how was Penkovsky found out? Penkovsky, as we can now guess, was implicated to the KGB by George Blake. and executed. Many of our spies were also lost to Kim Philby and his Cambridge Five. All of whom were working within our and our allies intelligence communities.

Intelligence, its gathering and analysis, is critical for our Nation. When it is not done well, or when it is not well heeded, all of us Americans suffer its consequences as does suffer our great Name and Liberty. But, when done right, and when acted upon with prudence and wisdom the results are magnificent; the results are like MAGIC. For how can we stop, or at least be prepared for the next war? How can a cold war be prevented from going hot? How can a nuclear holocaust be prevented? Why is there hope of any of this: Indeed as the anagram of the masks asks, Why is there a hope?: the Answer IS our ShadXws. There is hope due to good and dangerous work our spies, like Oleg V. Penkovsky, and the people of the CIA, and the Intelligence Community of the United States of America do which protects our Nation and its Liberty. And for that I thank them.

... And while this is undoubtably true, Kryptos seems to point to more whys. One of which is "why T lied", or why Penkovsky lied. Lied about what? Kryptos seems to imply that some injustice has been done concerning him - or perhaps, one guess might be, that there is some piece of information which would absolve him of this lie but for security reasons could not be revealed at the time, and still had not been at the time of Kryptos' creation.

There are many possibilities, as we can guess, since Penkovsky was found out by the KGB - but not immediately arrested it seems. I am hesitant to say the following since I have only done some basic reading, and I am certainly no expert in this field i.e. I do not know the subject matter well.

So with speculation, one guess might be what is talked about towards the end of an interview with one of his CIA case officers, Joe Bulik, given to "The National Security Archive" at The George Washington University:

<http://www2.gwu.edu/~nsarchiv/coldwar/interviews/episode-21/bulik1.html>

It concerns an agreed upon message that was only to be sent if the Soviet Union was starting a surprise nuclear attack on the United States and our allies:

Mr Bulik: *"... We had to have a contingency plan that if he were unable to get to anybody, and the biggest worry that the US military had was that if the Soviets planned a pre-emptive attack upon the United States by way of missiles, to give us a certain signal"*

And,

Mr Bulik: *"Well, when we working communications with him, besides the human contacts and the radio contacts, we had to have special signals from him in the case that he couldn't meet with anybody, but could, by way of telephone, give us the signal and it wasn't until we learned later that after he was captured that a signal came through that the Soviets were sending missiles over or planned to send missiles to the United States to attack us."*

Penkovsky has been accused by some that he tried to bring an end to the world - after trying to save it:

<http://www.thedailybeast.com/articles/2013/11/03/the-spy-who-saved-the-world-then-tried-to-destroy-it.html>

In other words, he lied to his interrogators and told them to send a message he knew which could lead to the starting of nuclear war. This might be the lie, and if this is what is being referred to, maybe Kryptos knows something else. Something that tells a different story. Why was the message sent, when it was not true. Why was Penkovsky abuzz? Since Penkovsky was in KGB hands when the telephone call was made, it stands to reason that the call must have been made by the KGB. It is presumed then that KGB must have found out about the message during their interrogations of Penkovsky.

Kryptos suggests that the reason why Penkovsky lied was due to the KGB's use of "enhanced interrogation techniques". Namely, that the KGB had drugged him with LSD. Possibly, they used LSD as a truth serum, or setup a situation that lead Penkovsky, while drugged in a hallucinated state, to truly believe that the Soviets were about to launch an attack and reveal the coded actions. It is clear that they used this signal as a trap to capture one of our Agents handling Penkovsky, Dick Jacobs.

But when the CIA found out what had happened, why did the CIA , at best, leave it to be suggested that Penkovsky had signaled the US and Britain that the Soviets where preparing to launch an attack and presumably did this to get the US to launch an attack against the Soviets? One reason might be to protect the source of this information within the Soviet Union, if it was from a secret source.

Kryptos continues with the plan to save Penkovsky. Joe Bulik came up with a PR plan to save Penkovsky (again the same interview):

"Well, during the course of the trial, there's no question either at the beginning of the trial or the middle of the trial or the end of the trial, there was no question in my mind that Oleg would be executed. And the first thought in my mind was, can I save his life? Can I save him from being executed? So I proposed a plan, a copy of which I still have today, I brought it with me, I stole something from the CIA, although they have copies of it. This is a plan that was to go to four KGB residencies in the world and four GRU residencies in the world and the reason I did that was to have the KGB and the GRU officers throughout the world know that the Americans were trying to save Oleg Penkovsky's life. And the idea was that we had enough information that was very embarrassing, not only to the KGB, but to the Soviet government, tremendously embarrassing to them, that if they executed him, that we would publish that information in the western press..."

So his plan was to embarrass the KGB, and Penkovsky wasn't telling all that he knew either, as Mr. Bulik further explained:

"He kept the identities of his old case officers secret and when the Soviets published a book on the Penkovsky case and the trial, they couldn't identify the four case officers, 'cos he figured we might possibly save his life and I tried to save his life."

However, another plan was hatched. The White House and the CIA tried to save Penkovsky, and it seems that they sent (or let go) Kim Philby to the Soviet Union. I'm not so clear as to the details of their plan.

However, maybe it went something like the following, and note that one must place themselves in the context of the early 1960's to understand what was happening. It seems that they lied about Kim Philby and/or the Cambridge V in some way and tried to use this lie to threaten to expose something that they thought the Soviets would be very anxious about - enough to deal with Penkovsky. It has been said that James J. Angleton, who was the head of the CIA's counterintelligence program, had thought that Kim Philby was a triple agent. Or perhaps he knew that Philby was a double agent and fed him wrong information, therefore effectively making him a triple agent. If so, maybe the plan was to send Kim in order to release Penkovsky. The CIA might of, by this time, found out that the KGB had given LSD to Penkovsky. If so, also they may have threatened to expose this information to the world to embarrass the KGB. Whatever the case, Kryptos suggest that a lie was told about George Blake in some way, and maybe this is it: George Blake was not part of the Cambridge V.

George Blake was finally exposed and caught in by information provided by Michael Goleniewski, a Polish triple agent who defected to the CIA in January of 1961. In addition, other moles and Soviet agents were caught with the information that was provided by him. Later that year another KGB agent, Anatole Golitsyn, defected to the CIA in December. Golitsyn brought news of more moles within the western intelligence community. In specific about Britain, he told of the KGB's "Ring of Five" spies, but it seems that he did not know who they all were, although he is credited by many for providing the final proof that Kim Philby was one of them (however not by DCI

Stansfield Turner²). *"Golitsyn's definition of the Ring of Five was taken so literally not merely by Wright [the head of MI5 at the time] and the small band of conspiracy theorists but by other Service investigators"*³. If that was the case, then they would have had four of them already: Maclean, Burgess, Philby, and Cairncross (he had confessed to MI5 years before). So they would have been looking for another one. All were rumored to have gone to Cambridge together, but if the British had not considered this fact, or didn't know it at the time, they might have included George Blake in the group, and thus considered that they had found all of them.

Kim Philby in his book, "My Silent War", eludes with the following quote:

"So, after seven years, I left Beirut and turned up in the Soviet Union. Why? Maybe I was tipped off by a Fourth Man. Maybe someone had blundered. It is even possible that I was just tired."

Indeed, whatever the case someone did blunder - and it seems Philby knew that they did not know all five of them. So when Penkovsky was executed and when Kim decided to stay in Russia, as he had been a double agent all along, it must have sent the CIA and SIS into panic mode. Were they still penetrated, as Golitsyn suggested? Soon after, the "Forth Man" was found to be Anthony Blunt. Blunt was given immunity by the British for telling all that he knew, and his treason was covered up. Blunt was still allowed to continue his regular life, part of which was the "Surveyor of the Queen's Pictures" in addition to being eventually becoming a professor of art history at the University of London, and director of the Courtauld Institute of Art. He was also related to the Queen Mother.

Why was he given immunity, especially when a couple of years before, Blake was given 42 years in prison? I don't know but perhaps a new deal was struck up with the Soviets, one that didn't include saving Penkovsky. Perhaps it involved giving Blunt immunity. It is no exaggeration how embarrassing it would have been if the Soviet's reviled SIS and the CIA messed up by sending Philby or that their agents had penetrated from MI5 and MI6 all the way to the Royal Family. (if this is correct, it might be said that the Penkovsky affair was mostly covered up in part due to art - and now revealed due to art). A hint of this might be found in a paragraph from the book "Dead Drop" by Jeremy Duns:

"Two years later [1964?], when the Sunday Telegraph serialised Greville Wynne's [a British intelligence worker caught by the Soviets from his work in the Penkovsky case] account of his involvement in the operation, Wolfenden [a newspaper reporter who was working for the KGB and MI5, playing both sides] wrote an article claiming that the Soviets were considering releasing 'their own version of what Mr. Wynne said under interrogation'. The implication was that Mr. Wynne something to hide, and that if too much propaganda hay was made of his account the KGB would reveal some embarrassing secrets. They never followed up on this threat, but Wolfenden's article left the impression that crucial information was being omitted, and that the Russians had a hold on British intelligence"

In Kryptos, there are hints that Kim's Lucid Memories say that the reason why Penkovsky was not saved or cleared of lying was ENVY. That might be the case, but it also might be deceiving, for there is another interpretation of this word.

E N V Y: Expose Not [Cambridge] V - [that is] whY.

Also note:

If one decrypts the X_b plaintext with the key 'V' one might find an answer:

Dec(V, Q R KM G E PR TRAP CV IS F, JFK TO D CRY O Q D LIE Y) =
X O TV L I AO BOEA GK ND J, QJT BC H GOS C X H UNI S

which reversed reads:

SIN **U**, H X C SO G, H C B T J Q, J D **N** K GA**E** - O, B, **O**AIL V TO X
SIN **G**, H X C SO G, H C B T J Q, J D **A** K GA**Y** - O, B, **W**AIL V TO X

misspellings: U N E O, GAY, W

and doing the same with the X_c plaintext gives:

Dec(D C TEN SYM C P X J) = H, G, BI W D'S V GAY Q

If we look at the end of this text we see "W, D's V GAY ?"

The two together I believe, as unbelievable as it sounds, suggest that Allen Dulles and the CIA threatened to expose Kim Philby and the Cambridge Five as a group of homosexuals. Or is it?

GAY might be, as with ENVY a kind of code. If reversed Y - A - G might mean: whY - Anatole Golitsyn whY, or since he and Angleton were good friends: whY - Angleton and Golitsyn.

To understand why this might be, consider the following quote from "Of Moles and Molehunters" found on the CIA's website:

"Important is a definitive chapter in the Schechter-Deriabin book ["The Spy Who Saved the World"], that makes clear that, for the major period of his intelligence production, Penkovsky was not under Soviet control, and his product was not and could not have been deception. The controversy over whether he was bona fide (fueled largely by Angleton and Golitsyn) had arisen after Penkovsky's arrest on 22 October 1962 and was only put to rest within the CIA's Directorate of Operations in 1979 by a long-overdue study of the case. That the Agency made important documentary material available to Schechter and Deriabin so they could provide many of the details to the

public via their excellent book was a laudable action by Dr. Robert Gates, who was DCI at the time."

Also, "The Art of Betrayal" by Gordon Corera, reports that while in London, Golitsyn studied the notes from Penkovsky's case and *"became convinced that Penkovsky was a plant sent as part of a 'master plot' "*, and later: *"After Golitsyn had returned to Washington, he began to pursue the idea that the Soviet Union was undertaking a 'master plan' of 'strategic deception' to fool the West and its intelligence agencies".*

In the wake of the Penkovsky affair it seems that the the CIA and SIS became paranoid about moles within. Golitsyn was able to convince Angleton that more moles existed (Sasha for example). This attitude of conspiracy and paranoia, lead both agencies, and particularly the CIA, to conduct many mole hunts. Many loyal intelligence officers became suspect and were wrongly accused, to the point where some, as is reported in "Of Moles and Molehunters", within the CIA even wondered if Angleton himself was a Soviet Spy. This paranoia hurt the agency, and it wasn't until 1974 when Angleton was removed from the CIA by DCI William Colby that the CIA began to recover.

So the lie that the CIA might have told about Penkovsky was that he was not a genuine agent, but rather a triple agent secretly working for the Soviets as part their "master plan". In this case, why would they wish to correct any lie Penkovsky might have told. Apparently, this was the view of the CIA until, after Angleton, conducted a review in 1979 and determined that Penkovsky was genuine. Also, in 1979, Anthony Blunt was revealed to be the "Fourth Man" by Margaret Thatcher. So both reasons, GAY and ENVY, would appear to be nullified as to the reason which to let Penkovsky's lie go uncorrected. The reason might be more banal, that intelligence agencies rarely reveal information when they do not have to.

Whatever the case, Kryptos says Kim sent a message back to the US and Great Britain as to the fate of Penkovsky - an 'X' meaning that Penkovsky had been executed. President JFK and the CIA were distraught about it, but Kryptos seems to say, they had no one to blame but themselves, for it was their plan which had failed.

The actions of the CIA, our shadows, after using the intelligence which Penkovsky gave, brought the world back from the brink of nuclear war. Just a couple of months later, the Soviet's shadow's, the KGB's, "enhanced interrogati on techniques" with LSD put into play actions that could have brought on another close brush with nuclear war again. Kryptos, I believe, suggests that the CIA, after finding this out, allowed a lie to dishonor the man who provided that intelligence. Why? Is it for the reason that it considered Penkovsky, for a time, to be a triple agent, or is it because the CIA decided along with the SIS to cover it up and not expose Anthony Blunt, and their own blunder with Kim Philby.

Knowing this, Kryptos poses a question - A is X, or A is L; is the Answer the Shadows or is this answer a lie? On the one hand you have the CIA and its agent Penkovsky, who's actions helped prevented a nuclear war. On the other hand, you had

the actions of the KGB which could have lead to the starting of a nuclear war. You have the the mole hunts of the CIA, wrongly accusing Penkovsky and many other loyal officers of being Soviet agents. You have the cover up by the CIA and the SIS of Blunt. Kryptos strongly suggests the former, and that ENVY, Kim Philby's answer, is a lie. It promotes GAY, that Golitsyn and the conspiracies he spread were the reasons why Penkovsky's lie and the actions around it were not exposed.

Again, for A is X, I would like to give a another quote from Joe Bulik, one of Penkovsky's CIA handlers, said in the interview about the information that the spy gave and the CIA during the crisis:

"... Bobby Kennedy said that the Cuban Missile Crisis, which Penkovsky helped us with, was worth all of CIA from 1947 to 1961, all the money that was spent on CIA to that time, it was worth, at least financially that's what it was worth and of course it saved our country. It kept cities from being blown up and it kept the war from going into a nuclear disaster."

I think that these examples, if I am right, show us some important lessons:

That in things relating to nuclear weapons, while our shadows saved us once, too many shadows surrounding them, concerning their numbers, locations and capabilities, (but not how they are built) are a bad idea. Perhaps having them, or at least too many of them, is a bad idea. Jim Sanborn, I believe, hints at this in his work "Cyrillic projector", where the second encrypted document refers to Andrei Sakharov, a Soviet nuclear physicist who in his later years worked towards ending nuclear proliferation.

That, while the business of the shadows will always, as in any war, involve some actions that under normal circumstances are immoral, grossly immoral behavior when committed by them can seriously threaten the very things that they serve to protect, and threaten to undermine their own primary purpose. The CIA was endangered by its own paranoia which led its counterintelligence unit to conduct mole hunts to the point that they resembled witch hunts. Here, it should be noted that William Webster was brought in to help the Agency deal with credibility after the Iran Contra Affair. It seems that Kryptos's subtle message, that witch hunts (mole hunts) like that of the past are harmful to the Agency, might have been meant as a reminder to those seeking to find wrong doing.

The KGB's use of LSD and other immoral interrogation techniques, in this case with Penkovsky, inadvertently could have lead to the start of actions that might have lead to the destruction of their country. It also shows, at the same time, that the primary functions of our shadows, that of intelligence gathering and interpretation, are critical to the security of our country.

And so perhaps the best realization which can be made about the about Shadows is that the answer is neither true nor lie, black nor white, but the that answer is that Shadows are Grey.

This must be what is buried; documents clearing Penkovsky, hidden gratitude for him from the CIA, and explaining why it was necessary to do what they did. Other documents should be there too; ones that explain their views on Shadows and this event by Kim Philby and George Blake, or maybe Anthony Blunt. Also there might be documents detailing the White House's plan utilizing Kim Philby to save Penkovsky. In addition, maybe there is a document contain what Kryptos hinted at: an agreement by the Soviet Union, the USA, and Great Britain to "END Y" even happened; after the Cuban Missile Criss, and Penkovsky's execution on May, 15, 1963, steps were taken to protect against "accidental" nuclear war, such as the installation of the Moscow-Washington hotline.

However, these document still remain hidden as best as I can tell. I'm not sure that they are still classified since why would Jim know about them, unless he too got security clearance - but then Kryptos would be ... It seems to me that DCI Webster knew, and helped. I should think that all the directors know everything about Kryptos except the exact plaintext. To that, they would still have a very good idea. As "Of Moles and Molehunters" says, Bob Gates, the director after Webster, helped release many documents concerning Penkovsky.

I believe that Jim Sanborn and those who helped him are asking us to aid them to clear Penkovsky. To clear the shadows which surround him with those documents. While shadows are undoubtably necessary, sometimes what is also necessary is that, when they are no longer needed, they are Enlighten for the rest of us to see, for honor to be given or restored, for fault to be better assigned and understood, and for all of us to learn from. As to the call for aid by Jim Sanborn; Jim - I am with you. Whatever I can do to help bring this to light, I will try to do, and I ask all of our Yahoo Group to help Jim in this too. To fix the BUGZ of that great quote on the OHB wall:

**And Ye shall know the truth and
the truth shall set you, Penkovsky, free!**

**Salam and Happy Discoveries and Decrypts,
Ibn Şifre**

Rocks - Spoiler Alert - try to figure it out on your own, maybe I missed something!

Your still reading?! - Oh I know, you want to know where the treasure is buried! I don't know - but I can guess. Are you sure you don't want to try and find out for yourself? If so then stop reading.

Note: Please don't go try and dig anything up at Langley without permission from the DCIA, the Director of the CIA. At the very least, you would be disturbing their Art, and just as the Louvre would not like someone doing anything to the "Mona Lisa", I can't imagine that the CIA would take kindly such actions. Besides, I would guess that the DCIA knows exactly what is buried where and has the unencrypted originals.

From K4 O-PT we can guess that there are 'V L ENCR BURIED': five letters, or documents, encrypted and buried. That would suggest five different locations.

1: Lucid Memory - from Kim Philby

The clues suggest to encrypt our K4 HX-PT with the letter 'X' and look near the end, or back of a reference to Allen Dulles: 'FIND BY ANORM BERLIN HEAD EXP BCK'

K4-HX deciphers to:

D SIS LLL VS O-H-WYE ON BH ZERO ABUZZ X
FAN B CQD, FIND BY ANORM BERLIN HD, EXP BCK - JIM S
T REF, GS MARK IS WD X
ODD RIDDLE IO IS Q J

So if you encrypt HX with a X:

B TGT III QT P-F-UKC PL SF WCZP OSNWW V
DOL S AMB, DGLB SK OLPZJ SCZIGL FB, CVR SAX - HGJ
T Y Z CD, ET JOZX GT UB V
PBB ZGBBIC GP GT M H

and look at the end (back) of the first reference to Allen Dulles, BH for BERLIN HEAD, BHZER - OABUZZXFANBCQ encrypts to POSNWWVDOLSAM

and that is POS NWW V DO L SA M

If you look at a Position North West by West from T (T is your position and reference) to the other rock, you find V L, a group of five letters, the L and M groups - i.e "LUCID - MEMORY"

Take the AISX key word and encrypt LUCID:

Enc(AISX, LUCID) = **X**DIGL
or X (X marks the spot) DIG (dig here) L (at the L)

Two: The CIA's interpretation

From the P PT:

CIA POSition IN South WorD Vs Lucid Memory

If one goes due south on the compass rose it points to the letter T of

DIGETAL INTERPRETATU

Note: Digital Interpretation does not mean binary. Digital, from digits, from latin digitus. A 'digit' is a written symbol for any of the numbers 0 to 9. So digital is something relating to ten.

Digital -> of ten -> of Shadows
Digital Interpretation -> Shadow's Interpretation.

One can use the AISX key word and get:
Encode(V, AISX) = PEYQ or better: Q YE P (reversed)

Use the QYEP key:
Enc(QYEP, DIGETAL EEE INTERPRETATU) = TLXHCY HOG KVGFSUGIDXW

Notice the last 5 letters reversed are: W X DIG
with the T decoding to X (again X marks the spot):

However some might, like Kim, might disagree:

Dec(DICUL, LXHCY HOG KVGFSUGIDXW) = ACOPMM ZVM CFCTLIEXSIAG

or at the end:
T LIE XSIA G

Three: documents of George Blake (or KGB)

DIG E T

Note that:

Dec(T, DIGETAL...) = SECAKPG ... SEC A KP, G

And the hint in the O_b PT

BINS -> B IN S -> B IN SW

Which would give us:

T IS YOUR POSITION **E**

Dec(T, T IS YOUR POSITION E) = KEYXRLWZRYEKERIA
KEY X R L, W TRY

From steganography of letter O: P OPEN SAY T, S DIG X READ E WR

Enc(XDIG, T IS YOUR POSITION **E**) = YZUIPOJJPJTLGIB**X**

Note the last 7 letters reversed:

X BIG L T J

Four: The Shadow Forces

Use the key 'LSD O' but with the L of the 'LSD O' replaced with an O, and reversed to get 'O DSO' (one could also play with the padding of the ciphertext and change the key to DSOO for D, S, and OO, the Shadow Forces: CIA, SIS and double O's)

Enc(ODSO, **S**HADOW EE FORCES EE) = EXGIDA LJ LIAHJJ LJ

or when the plaintext is reversed, at the end:

J L A DIG **X** E

This X corresponds to the H of SHADOW FORCES

Five: Virtually Invisible

Dec(**TEHB**, EE VIRTUALLY E EEEEEEE INVISIBLE) = AK BAWNAZGSH P
AKWPAK REMTMATSW

Note the last part:

REM T M AT SW; remember T L at SW, so that means use XBIG (and offset by 2 i.e. remove the first two EE's).

Enc(**XBIG**, VIRTUALLY E EEEEE**E** INVISIBLE) =
QWJLNISTK N KXCNK**X GREY**TWWTC

Note the last part:
X GREY T WW T C

Shadows are X GREY T WW T C

This might be a message from DCI William Webster about Kryptos.

Now take this plaintext, put back in two letters as padding, and use the key GREY but with the last Y changed to an E for expose:

Enc(**GREE**, NK X GREYTWWT**C**) = SR C XHFGIDXIQ

or reversed Q I X DIG F HX C
The X corresponds to the letter B of INVISIBLE

Summing up:

Buried at Letters:

L of **L**UCID MEMORY
T of DIGETAL INTERPRETAT**U**
E of T IS YOUR POSITION **E**
H of **S**HADOW FORCES
B of VIRTUALLY ...E INVISIBLE

E of VIRTUALLY ...**E** INVISIBLE

or if we encrypt the last part of the P (like the O_c PT suggests):

Enc(X, ENVY IN MSG JS) = CLQK GL JTE HT
or at the end **L J TEHT**.

Now the last T in TEHT may be changed to an B and then add an E for expose. So that we get the letters L TEHB E.
Lie Shadows - Enlighten (or Expose)
