

This is the matrix for K3 from the NSA FOIA, and I think this is the actual and intended work sheet.

Kryptos 3

Kryptos 3 on an 86 x 4 matrix read **right to left**. Constructed so 4 68 can emerge as a key date in the ensemble perhaps, along with the misspellings in Columns 11 and 22 of K2, the length of K1, etc. The encryption starts in column 79 and proceeds to the left in continuous skips of 7 columns until the final column 86. The content of each column is taken bottom first (79=END) and is then placed sequentially into the art work.

So in the upper left corner we have EN DYAHR OHN which offers some targeted interpretation opportunities: DYAHR anagrams to HYDRA, and if the gaps are filled with three letters (three letters are pushed down into the gaps) EN **NE** DYAHR **J** OHN would fit pretty well. DYAHR also works very well with TNREY immediately below. The same HYDRA works with the raised letters YA R (Ray) and TN=Tennessee, REY is Spanish for king.
