

K1 to K3 condensed version

To try and summarise all of my findings from my previous posts and documents to just the relevant sections without all the pre-amble.

K1 sets direction

BETWEEN SUBTLE SHADING AND THE ABSENCE OF LIGHT LIES THE NUANCE OF
IQLUSION

In this statement we note the following

- $SS - AL - NI$ are the key characters
- Anything is POSSIBLE
- Illusions have to be VISIBLE
- Illusions are based on LIES. This adds LY to the options

K2 shows us our friends

IT WAS TOTALLY - INVISIBLE HOWS THAT POSSIBLE?

When we bring LIES into the equation from K1, we quickly find the letter pair LY which is prominent in this phrase. It was actually this pair that drew me to the movement of characters and originally made it stand out.

What we note from this is the set $ALLY - IN - SS$

If we then look to K4, we very quickly find: $SSOTWTQSJQSS$ which denotes the sculptors initials surrounded by Qs inside pairs of SS.

We also note that the initials are rotated but how?

K2 rotates to define a location in K3

The first statement in K2 is:

IT WAS TOTALLY INVISIBLE HOWS THAT POSSIBLE?

Here, we find the characters $AL - IN - SS$. By placing a pivot point between the $I - N$ we can rotate these 6 characters to become $SS - NI - AL$. This then matches with the order of characters in K1.

My current theory defines blocks of 6 characters with every centre pair rotated backwards and the outer pairs swapped in position.

For example: *CNBFLS* becomes *LSFBCN*. In case you're wondering, no, these pairs do not appear in the cipher. For this, look closely at my own profile. Maybe you'll appreciate the answer.

When we then look to K3, we again find the letters *SS – NI – AL* and we'll cover this shortly.

K2 is a key cutting machine for a 97 character key

Take the phrase THE EARTH'S MAGNETIC FIELD. This is 22 characters long (without spaces) and comes in the pattern 3, 6, 8, 5.

If you haven't read my previous posts about K3, don't worry, I'll explain this later but from this we discern that there are 4 characters that don't move.

The sum of the numbers in the coordinates is 64. Add to this 22 and you're left with 11 difference to 97. Subtract from this 4 and you are left with 7. This gives the sequence $[3, 6, 8, 5, 7] + 4$

For the example to work, we need to split the 4 in half $[2, 2]$

Now we come to the coordinates.

Extract the numbers from the coordinates. This is:

$[3, 8, 5, 7, 6, 5, 7, 7, 8, 4, 4]$

Add to this the set of numbers from THE EARTH'S MAGNETIC FIELD and for the purposes of this example, we'll place the 4 at the end.

$[3, 6, 8, 5, 7, 3, 8, 5, 7, 6, 5, 7, 7, 8, 4, 4, 2, 2]$

Now to the cadence.

This is the order that people speak within the passage.

Person 1. IT WAS TOTALLY INVISIBLE HOWS THAT POSSIBLE ?

Person 2. THEY USED THE EARTH'S MAGNETIC FIELD X

Person 2. THE INFORMATION WAS GATHERED AND TRANSMITTED UNDERGROUND TO AN UNKNOWN LOCATION X

Person 1. DOES LANGLEY KNOW ABOUT THIS ?

Person 2. THEY SHOULD ITS BURIED OUT THERE SOMEWHERE X

Person 1. WHO KNOWS THE EXACT LOCATION ?

Person 2. ONLY WW THIS WAS HIS LAST MESSAGE *X*

- This is a lie. Someone else knows

Person 2. THIRTY EIGHT DEGREES FIFTY SEVEN MINUTES SIX POINT FIVE SECONDS NORTH SEVENTY SEVEN DEGREES EIGHT MINUTES FORTY FOUR SECONDS WEST *X*

Person 2. LAYER TWO

This gives the cadence 1 – 2 – 2 – 1 – 2 – 1 – 2 – 2 – 2

This cadence is incomplete, we need a 1 – 2 at the beginning. The whole beat of this cadence always felt wrong to me, it was always missing something like walking in half way through a conversation

1 – 2 – 1 – 2 – 2 – 1 – 2 – 2 – 2

Take this cadence and split it over the top of the sequence we just generated.

1	1	2	1	2	2	1	2	1	2	2	2							
2	3	6	8	5	7	3	8	5	7	6	5	7	7	8	4	4	2	2

These match perfectly and this is a key cutting machine.

Take the ciphertext and split it according to the pattern shown. I'm going to use the following python code to achieve this, placing the result in columns to attempt to show what I mean.

```
1 import pandas as pd
2
3 cipher = (
4     "OBKRUOXOGHULBSOLIFBBWFLRVQQPRNGKSSOTWTQSJSSEKZZ"
5     "WATJKLUDIAWINFBNYPVTTMZFPKWGDZXTJCDIGKUHUAUEKCAR"
6 )
7
8 cadence = [1, 2, 1, 2, 2, 1, 2, 1, 2, 2, 2]
9 sequence = [3, 6, 8, 5, 7, 3, 8, 5, 7, 6, 5, 7, 7, 8, 4, 4,
10             2, 2]
11
12 i, j = 0, 0
13 data = {}
14 for c in cadence:
15     m = []
16     b = sequence[i:(i + c)]
17     i += c
18     for a in b:
19         m += [*cipher][j:(j + a)]
```

```

19         j += a
20         data[i] = m
21
22     df = pd.DataFrame.from_dict(data, orient='index')
23     print(df.transpose().fillna('').to_string(index=False))

```

This gives us the result:

1	O	R	F	L	S	K	K	N	Z	G	K
2	B	U	B	R	S	Z	L	Y	F	K	C
3	K	O	B	V	O	Z	U	P	P	U	A
4		X	W	Q	T	W	D	V	K	H	R
5		O	F	Q	W	A	I	T	W	U	
6		G		P	T	T	A	T	G	A	
7		H		R	Q	J	W	M	D	U	
8		U		N	S		I		K	E	
9		L		G	J		N		Z		
10		B		K	Q		F		X		
11		S			S		B		T		
12		O			S				J		
13		L			E				C		
14		I							D		
15									I		

Unless I'm very much mistaken, that to me looks like a key.

Now we just need a lock.

K2 gives us directions

One thing that bothered me about K2 is that I couldn't account for the U to O conversion from the word UNDERGRUUND

Take the coordinates and remove all the numbers from it so that:

THIRTY EIGHT DEGREES FIFTY SEVEN MINUTES SIX POINT FIVE SECONDS NORTH
SEVENTY SEVEN DEGREES EIGHT MINUTES FORTY FOUR SECONDS WEST X

Becomes

DEGREES MINUTES POINT SECONDS NORTH DEGREES MINUTES SECONDS WEST X

Now: DEGREES MINUTES SECONDS is 21 characters without spaces. This is the character U in the alphabet.

In the word UNDERGRUUND we have two of them. Remove them.

POINT NORTH WEST X

This is 15 characters without spaces. This is the letter O.

K2 tells you where to look

We remove the letter U in the previous step but we still have 2 left to deal with.

In the word UNDERGRUUND, there are 2 Us here. Remove them.

UNDER GR ND

These letters do not appear anywhere together in the whole ciphertext. These are an identifier for a later phase.

K2 uncovered phrases

THE INFORMATION WAS GATHERED

I presume this is what we're doing right now?

UNKNOWN LOCATION X

Do not have an answer here

DOES LANGLEY KNOW ABOUT THIS ?

Do not have an answer here

THEY SHOULD ITS BURIED OUT THERE SOMEWHERE X

Do not have an answer here

WHO KNOWS THE EXACT LOCATION ?

Do not have an answer here

ONLY WW THIS WAS HIS LAST MESSAGE X

The word ONLY is a lie but the rest is unanswered

And the new one

POINT NORTH WEST X

I think this needs to read POINT X NORTH WEST but I'm not sure yet.

K3 is a perpetual motion machine

This is largely a copy-paste job from my previous document. Don't worry if you've not read it. You don't have to. This explains everything you need to know.

In passage 2, we located the boundaries of the room as set out in passage 1.

These are: SS and AL. It is my opinion that within these boundaries, everything we require will fit. Here, I will go through the process of packing the room with all that is required to move forward *possibly into the cipher text known as K4*.

The length of the relevant section is 141 characters. By the time this is finished, you will be left with only 97 characters.

The characters SS and AL define the boundaries of the room we leave these in place throughout this build. These are the 4 characters I mentioned earlier in this paper.

```
1 SS AGEDEBRISTHATENCUMBEREDTHELOWERPARTOFTHEDOORW
2 AYWASREMOVEDWITHTREMBLINGHANDSIMADEATINYBREACHI
3 NTHEUPPERLEFTHANDCORNERANDTHENWIDENINGTHEHOLE AL
```

The first thing we need to do is clear the passage debris, so lets get rid of that.

```
1 SS THATENCUMBEREDTHELOWERPARTOFTHEDOORWAYWASRE
2 MOVEDWITHTREMBLINGHANDSIMADEATINYBREACHINTH
3 EUPPERLEFTHANDCORNERANDTHENWIDENINGTHEHOLE AL
```

The next instruction tells us OF THE DOORWAY WAS REMOVED so lets get rid of that:

```
1 SS THATENCUMBEREDTHELOWERPARTWITHT
2 REMBLINGHANDSIMADEATINYBREACHIN
3 THEUPPERLEFTHANDCORNERANDTHENWIDENINGTHEHOLE AL
```

I MADE A TINY BREACH IN THE UPPER LEFT HAND CORNER

OK, lets do that: Take "A TINY BREACH" and move it, overwriting "THATENCUMBE"

```
1 SS ATINYBREACHREDTHELOWERPARTWITHT
2 REMBLINGHANDSIMADEINTHEUPPERLEF
3 THANDCORNERANDTHENWIDENINGTHEHOLE AL
```

Next step:

THEN WIDENING THE HOLE A LITTLE I INSERTED THE CANDLE AND PEERED IN

This one confused me until I realised it meant everything after INSERTED so lets do that.

```

1  SS ATINYBREACHREDTHELOWERPARTWITHT
2    REMBLINGHANDSIMADEINTHEUPPERLEF
3    THANDCORNERTHECANDLEANDPEEREDIN AL

```

Reading this passage, you will notice that it states “A TINY BREACH RED THE LOWER PART” and THE CANDLE AND PEERED IN should be made in the upper left hand corner.

Note how there is an A missing in the word RE[A]D. If I read this correctly, this passage contains the word DESPARATLY, which uses an A in place of an E, and there is an E missing. I believe the A in READ is the counterpart to the missing E in DESPERATELY.

So, lets do that:

```

1  SS THECANDLEANDPEEREDINREDTHELOWER
2    PARTWITHTREMBLINGHANDSIMADEINTH
3    EUPPERLEFTHANDCORNERATINYBREACH AL

```

This, if I’m not mistaken, is a perpetual motion machine. It is constantly reversing itself around TREMBLING HANDS.

K3 Uncovered phrases

THE HOT AIR ESCAPING FROM THE CHAMBER

I believe we do not need this section, it literally escapes.

CAUSED THE FLAME TO FLICKER

I have not yet understood this phrase but it may relate to the change in structure of this phrase as it moves between locations.

BUT PRESENTLY DETAILS OF THE ROOM WITHIN

The word PRESENTLY is a lie but DETAILS OF THE ROOM WITHIN may relate to how K4 should be cut at one end.

EMERGED FROM THE MIST

I believe this is the second cut.

Finally

CAN YOU SEE ANYTHING Q

I'm not the first person to think this is a question directed at the character Q but given that the best place to look for something is from an elevated position, I personally believe that this question is being called up to the Q in IQLUSION who I imagine answering "No, I'm in the dark".

In other words, look between the Qs.

Coverage

In this, we cover some, if not all the meanings of

- PALIMPSEST as a keyword
- ABSCISSA as a keyword
- The Q in IQLUSION
- The U in UNDERGRUUND
- The A and missing E in DESPARATLY

We find a way to rotate the characters We find multiple meanings for K1 and K2 We find 2 separate machines

And yet there is still more to find.

Final thoughts

One thing I am coming to believe is that Mr Sandborn re-used every single part of this sculpture, often with multiple meanings.

Whilst there is still many phrases left to decipher and I do not believe K4 will be broken until every single phrase has been understood, I am not yet entirely convinced that every part of this cipher is related to how K4 ciphertext moves.

Only time will tell on this and we're not there yet.

I think only K1 is fully explained right now.
