

Addendum to the original paper

As an addition to this revised paper, new evidence is provided for the first time that shows a concrete rationale for the rail system previously put forward. These observations also expose the order in which the 6 rails should be processed. It should be noted that this new information on processing order and constraints negates the text provided for rails 3, 4 and 6 given in the original Eris & Harmonia paper. Most importantly, this new evidence also gives a firm foundation to the idea that both the plain and cipher text must be viewed simultaneously in order to make sense of how K4 should be processed.

The US Dollar and K3

Before examining the new evidence, we should first reacquaint ourselves with the design and detail of the US Dollar. The Great Seal of the United States has on its reverse side a 13 stepped pyramid topped by a shining eye of providence along with the Latin phrase, 'ANNUIT COEPTIS', which is commonly taken to translate as 'He has favoured our undertakings'. If we examine the plain text and cipher text of Kryptos for K3 simultaneously we can make the following observation.

S	L	O	W	L	Y	D	E	S	P	A	R	A	T	L	Y	S	L	O	W	L	Y	T	H	E	R	E	M	A	I	N	S		E	N	D	Y	A	H	R	O	H	N	L	S	R	H	E	O	C	P	T	E	O	I	B	I	D	Y	S	H	N	A	I	A

In the plain text we have an anagram of the word AN(N)UIT that is deficient in one N and in the cipher text we have an anagram of COEPTI(S) that is deficient in one S. The letters that take the place of the required S and N respectively are B and Y. If we now superimpose the positions at which these two anagrams appear to make up a square in both the plain and cipher text then we note the emergence of new information that relates directly to the final sentence of the unaltered K2 plain text.

The centre of the square produced in the plain text has at its centre 6 letters that are themselves an anagram of ID ROWS. Given that the excess letters of the previous Annuet Coeptis anagram are BY, we end up with a concrete relationship to the final words in K2, which are ID BY ROWS.

Exposure of the Rail System as a palimpsest

Given that this information relates to the last line of K2 and comes from a relationship that begins in the first line of K3, a symmetry relationship is implied as the sculpture has 28 rows. Therefore the last line of K2 is symmetrically mirrored by the first row of K3. On that basis the squares for the plain and cipher text in K3 can be reflected symmetrically to give the following results in K2.

This result is of interest as it points to a relationship in the cipher text that exposes the rail system put forward in the previous paper. If we examine the cipher text again in light of the letters GRE and FIV that are shown in the centre of the reflected plain text square then we find them directly over one another (this will be shown in the second diagram below). The existence of the first two rails that were comprised of repeating letter groupings of F, RE and V were pointed out to me by James Churchill, a member of the Kryptos Facebook site back in late 2020. These are shown below on the right hand side of the cipher text.

N	K	N	O	W	N	L	O	C	A	T	I	O	N	X	D	O	E	S	L	A	N	G	L	E	Y	K	N	O	W	A	*	Y	I	Z	E	T	K	Z	E	M	V	D	U	F	K	S	J	H	K	F	W	H	K	U	W	Q	L	S	Z	F	T	I	*

This led to an extensive hunt that yielded the 6 distinct rail positions shown in the last paper, but most importantly the F that completes the first rail when left shifted 13 places is the F of the (F)IV that sits directly above GRE in the ciphertext.

For those that haven't read the original paper, the 3 horizontal and 3 vertical rail positions are defined by a distinct grouping of the letters F, RE and V in a signature that only occurs in the cipher text 6 times as shown below. The location of the letters I and G have also been highlighted (in green) in order to show that this is the relationship we are being directed to observe via the GRE/FIV clue. (The first line of the cipher text has been left shifted 13 characters in the following diagram).

Vertical rails

The vertical rails have RE in the vertical plane across rows and a consistent separation of 6 characters between the F and V.

The previous paper exposed the underlying rail system shown above correctly, but did not show any evidence for the order in which the rails themselves should be processed. The solution to this problem was eventually resolved in August 2022 using software to examine letter frequencies in the rows where the rails occurred. The resulting common string that appeared to be present in the regions of interest was found to be, YES ITS.

YES ITS

The ‘YES ITS’ result is of interest for two reasons. The first was that it would appear to relate directly to the sentence in the diaries of Howard Carter that read, ‘yes, it is wonderful’, which proceeds the phrase, ‘can you seen anything?’. The second reason is that it was also visible within the plain text as an anagram in a position that appeared to mirror the previous two plain text clues.

Frequency Analysis

The statistical relationship of rows that contain the letters YES ITS in relation to the rail rows is now shown (Rows 10 in K2 and 27 in K4 also contain the letters for YES ITS, but are excluded in blue as neither fall across a known rail position).

plain text. To a certain degree, this part of the puzzle is something of a self-contained challenge that directly unlocks the ordering of the rail scheme that had been given in the adjacent clue.

Examining the plain text rows above in more detail we can see that two rows fall across the rail in rows 11-13, so in this instance the distribution of E's in the row between them is used.

In row 15 the distribution of E's in the plain text has been deliberately masked, so the positions of these have been re-instated in order to show the distribution prior to manipulation. These positions are shown in purple in the following diagram.

Rail Ordering given by distribution and frequency of E's in the known rail positions

If these assumptions are correct then it means that the order in which the rails should be processed are now:

Rail 1	Rows 1-3
Rail 2	Rows 7-9
Rail 3	Rows 24-26
Rail 4	Rows 11-13
Rail 5	Rows 13-15
Rail 6	Rows 3-5

The Apex of Kryptos

There is one final clue that remains to be discussed that is well in excess of the information provided within the scope of the previous paper. If we complete the symmetrical scheme given to us by the previous 3 clues then we can logically derive a fourth, which is shown here for the anagram TOMB LR.

These two regions in the plaintext share a remarkable geometrical relationship in that their diagonal components can be extended upon and joined in order to form a triangle comprised of 13 rows that is capped by an I.

We now appear to have come full circle in relation to the Great Seal of the United States as we started with the relationship ANNUIT COEPTIS and have now been guided towards the rendition of a 13 stepped pyramid topped by an I.

The centre line of the triangle in the cipher text rendition terminates on the D of USD in the first row. The plain text also has DUS in the vertical plane just to the right of this position, which is almost analogous to the original ANNUIT COEPTIS clue (shown in the next diagram). The previous papers in this series have always taken USD as the logical starting point of the K4 decrypt, so it is somewhat remarkable to find these additional observations that would also point to the significance of the USD string.

Another striking occurrence along the centre line in both the plain and cipher texts are the letters ANIT along the central axis of the triangle facing in different directions. The author cannot help but wonder if this is in some way linked to the choice of name for Antipodes, which is the sister sculpture to Kryptos, currently on display at the Hirshhorn Museum in Washington DC.

Readers with a keen eye for such things will see that the I atop the plain text pyramid occurs within the word 'POINT' and the third row of the cipher text pyramid has an anagram of 'CHEOP'. The letters ATE and AET are also found at the centre of both the plain and cipher text pyramids.

There is most likely still much to discover about the intentional placement of these designs within the puzzle and there is without doubt crossover with the Antikythera scheme put forward in the authors previous papers on the workings of 'The Machine'. One of the more interesting links is a fifth Key that sits between the four new keys already given above, which is LYCO. The relevance of that particular key will be discussed along with some additional crossovers with the Antikythera scheme in the revised conclusion at the end of this updated paper.
