Before: paint should be mixed with the color pigment before.
After: once it is dried, a mistake is masked with layer two.
Both: the masking tape: goes on before, and comes off after.
OTHER: the 2nd line of kt is AKRYPTOSABCDEFGHIJLMNQUVWXXZKRY;
 converted to Morse code is length 98. The crib mask ct pt is:

[illegible]

The binary nature of the `mask` splits into `layer1` and `layer2`:

Diagram illustrating the transformation of a grid state (likely a word search or puzzle) from an initial state to a final state, showing the effect of a mask.

before

B	E	R	L	I	N	C	L	O	C	K

The diagram shows the transformation of the grid state from 'before' to 'after' and then to 'crib'. The 'crib' state is the result of applying a mask to the 'after' state, where the mask is represented by the 'mask' label and the 'layer1' and 'layer2' labels.
