

M4 The key is the algorithm

Canadian member diconaxes@yahoogroups found a pattern linking NYP to ELY and VTT to OIE. His messages, signed as Todd, are #11858 and #11862 in Groups.io. This was his last message (as WW) in April 2011. I couldn't find the excel file that Todd shared. If anyone can reach Todd or has his file and can share it, would be great. Todd found a pattern to obtain from NYP the key ELY and from VTT the key OIE (the keys of BER LIN), using the normal alphabet ABC... Z. If we number A(1), B(2), C(3)... Z(26), the simple algorithm in modulo 26, which we call the Todd or T algorithm, is the following:

For NYP, initial position = 17

$$17 + N(14) = 5(E) \quad 17 - 4 + Y(25) = 12(L) \quad 17 - 4 - 4 + P(16) = 25(Y)$$

For VTT, initial position = 19

$$19 + V(22) = 15(O) \quad 19 - 4 + T(20) = 9(I) \quad 19 - 4 - 4 + T(20) = 5(E)$$

So, if this could be applied to K4, starting from a pointer or initial position, subtracting with jumps from 4 to 4, we obtain the position for each character of the ciphertext, then we add the code character and obtain the key, always with the alphabet ABC... Z. Then, using the alphabet KRYPTOS, with the key and the code we obtain the plaintext. That this algorithm does not work between P and V is not surprising, since as we saw in message M1 the rows slide to form BLUE, so the V is not encoded after P. In principle, the algorithm it is encouraging: it is simple and uses both alphabets (the alphabet ABC... Z is in the panel for something, right?). But the algorithm does not work with CLOCK.

Let's not get discouraged and keep investigating. I have built tables applying the T algorithm on all the ciphertext of K4, with the 26 possible initial positions and not only subtracting from 4 to 4, but also adding from 4 to 4, since as we saw in the M1 message, it may be that in any row the order must be reversed. The table, in three parts, is as follows:

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34

As was logical and confirming that the table works, in row 9 we see that BER is obtained started at place #64 and in row 23 LIN is obtained started at place #67. You also get BIND place

#1, another LIN place #5, NORW (Norway?) Place #8, BOSSY place #10, BAIT place #20, DO IT place #33, DATE place #47 and WEEK place #75 (a continuation of CLOCK). I found no other significant words formed with two initial positions in the style of BER + LIN.

Member Ferdinando Stehle from Italy, found a pattern in K4's DIAWINFBN sequence. I have been able to locate messages #33, #71 and #230 about it. Ferdinando's last message was in May 2015. He shows the pattern in two ways, always using the normal alphabet ABC... Z and modulo 26. The first way, if we subtract for each character the previous one, repeats the same pattern of 4 numbers: $I(9) - D(4) = 5$, $A(1) - I(9) = 18$, $W(23) - A(1) = 22$, $I(9) - W(23) = 12$, $N(14) - I(9) = 5$, $F(6) - N(14) = 18$, $B(2) - F(6) = 22$ and $N(14) - B(2) = 12$. The pattern is 5, 18, 22, 12, 5, 18, 22, 12. The second way, if we subtract from each character, the character four places back, you get the constant jump of 5: $I(9) - D(4) = N(14) - I(9) = F(6) - A(1) = B(2) - W(23) = N(14) - I(9) = 5$. Both the Ferdinando pattern like Todd's they use the common alphabet and modulo 26. While Todd's has jumps of 4 between consecutive characters, Ferdinando's has jumps of 5 between characters separated by 4 places. So let's try different jumps. We will call this first expansion of the algorithm the Todd Ferdinando or TF algorithm.

For the TF algorithm I have built other tables with other possible jumps. Since in modulo 26 subtracting 4 is the same as adding 22, it is not necessary to build the tables with jumps from 14 to 25. I still lack the tables with jumps -+0, -+2, -+3 and -+10, so if someone can build and review them that would be great. Also remember that my mother language is Spanish, so I have surely overlooked many words or parts of words that may be significant. It would also be nice if other members check the tables with the jumps that I have built. As we have seen, the tables for each jump are large. For this reason I have only included in this pdf, two other tables with jumps 9 and 11 that show the most promising results.

Jump 1 AGED started at place #17, GRAIN place #28 or RAIN place #29 (remember the RAINBOW), KRYPTO place # 81 (this can be important, 6 characters and nothing less than those).

Jump 5 Another LIN place #21, REAL #42 and LIAR #51.

Jump 6 GITAL #16 (DIGITAL?), NAD #20 + IR #23 (NADIR we will see that it is related to one of the portals), QQEEN #84 (another queen with mistake) and PLUTO #91.

Jump 7 CART #11, WEAR #24, MARS #29 (another planet), SOS #32 + PALIMYS #35 (SOS + 60% of PALIMPSEST?), TALL #73, FLEA #75 (TIE A FLEA?) and WERE #76.

Jump 8 DOG #1 + TAILS #4, QUEEC #36 (another queen with mistake), ELTA #37 (we'll see what DELTA appears later), SECR #41 after the QUEEC (SECRET is one of the special words discovered by another member of the Group that we will also see later) and USA #75 after CLOCK.

Jump 9 POU #18 + ITIOY #21 (75% of POSITION?). SAN #52 + FRGN #55 + CISC #59 (SAN FRANCISCO! This does not seem just random. Also, the O is in the sequence with the same

initial position as FRGN, that is, we have found 92% of the name of a city, that like BERLIN it is in the Word Time Clock, with the TF algorithm. Besides, SANFRANCISCO would be just before BERLIN). And HO #86 + TEL #88 (we will see that as DELTA, HOTEL appears later).

Jump 11 TAIL #2, FATE #6, BAND #9, SERPEN #10 + TCROW #16 (SERPENT CROW! Doesn't seem just random, it's a fable by Aesop, Greek like Kryptos. And it's after FATE, "FATE SERPENT

CROW" Is this why WW said it was something philosophical and obscure? Or is it SERPENT CROWN? Let's remember that we have SUPERMEN in the original matrix), WORD #18, TONE #24 (or STONE #23?), ZERO #25, CAMP #40, MEAL #45, ISHOUR #57, DREW #59, HOLD #75 (after CLOCK) and COST #85.

Jump 12 DOGS #9, HONG #17, JUST #31, HAIR #32 and RAIL #90.

Jump 13 GONE #16 and ABLE #24.

Summarizing the most important thing, we have found KRYPTO, NADIR, "SAN FRANCISCO", DELTA, HOTEL and "FATE SERPENT CROW". Some will be part of the plain text of K4? Others like QUEEN, SECRET and RAINBOW, which we have partially found, will they be part of the plain text of K4? KRYPTO there is no doubt that it is linked to the puzzle. NADIR, DELTA, and HOTEL appear in the sequence of portals Jim mentioned. Expanding on this TF algorithm, in the next M5 message, we will see how "NORTH E" and "BERLIN" are obtained in their correct places. There is much, much more!

Jose Luis
